

Revision of Outer Tolerances

April 2018

Gas Meter Reads

Update on proposed changes to Outer Tolerance Levels

Summary: The original inner and outer tolerance ranges were based on a best estimate of what the market believed to be appropriate. Post Nexus Go Live we are seeing a number of “valid” reads failing to pass the outer tolerance check. This has a consequential impact on a number of other processes

Latest Updates:

- Xoserve don't have full picture as reads are filtered by Shippers i.e. reads we know would be rejected are not sent in to Xoserve
- Outer tolerance range was a best guess at Go Live
- Analysis of filtered “valid” reads undertaken & suggested changes to tolerances set out
- The revised “Proposed” tolerances will allow large numbers valid reads to be submitted
- Should be a quick and easy change

Band	Current	Suggested	Proposed
1		No Change	No change
2	25,001	55,001	55,001
3	10,001	20,001	55,001
4	5,001	20,001	25,001
5	2,001	6,001	7,001
6	501	1,001	1,801
7	401	701	701
8	601	1,001	1,101
9	551	901	901
10	501	1,001	1,001
11	451	701	701
