

# UNC 0668:

Enabling permissions for the provision of information to Alt Han Company to support smart metering roll-out

Proposer: Kirsty Dudley - Eon

Panel Date: 20 September 2018

# Why change?

- AltHANCo is requesting access to data, governed under the UNC, to support the smart metering roll-out
- Permission to disclose the data is required before any services can be developed.

# Options

- The only viable option is to amend the UNC to permit the disclosure of data to AlthANCo
- It is expected a confidentiality agreement between GTs and AlthANCo will be required to set out the permitted purpose for which the data can be used.
- A Privacy Impact Assessment will be included in the Workgroup report

# Solution

- Amend TPD Section V to create the permission to disclose data to AlthANCo.
- Note: This modification will be amended if 0649S - Update to UNC to formalise the Data Enquiry Service Permissions Matrix, is implemented. All that will be required is the need to recognise AlthANCo as a recipient of data

# Recommended Steps

- The Proposer recommends that this modification should be:  
Subject to self-governance
  - Workgroup assessment to develop the modification for two months
