

UNC 0672:

Incentivise Product Class 4 Read Performance

Proposer: Chris Faulds - ScottishPower

Panel Date: 18 October 2018

Why change?

- There has been excessive levels and volatility in Unidentified Gas (UIG) since the implementation of Project Nexus 01 June 2017.
- To ensure the accuracy of energy calculations it is extremely important that regular meter reads are submitted for all Supply Points
- At present there are read submission performance reports and targets set out in the UNC but there is no incentive to achieve these targets.

Options

- A pre-modification discussion has taken place at the previous 2 UIG workgroups
- No other option was raised or discussed at the workgroups
- Therefore the proposer believes due to the nature of the change the modification route is the only viable option

Solution

- The modification will have 2 key parts:
 - a) Reporting & measuring performance vs. defined targets
 - b) Applying a read incentive charge
- It is proposed that current Xoserve reconciliation reports will be used to measure shipper performance
- Shippers will be measured against a target of % of Allocation energy volume reconciled to an actual read:
- An incentive charge would be applied to any shipper who fails to meet the defined target

Recommended Steps

- The Proposer recommends that this modification should be:
(delete as appropriate)
 - Considered a material change and not subject to self-governance
 - Workgroup assessment to develop the modification for 2 - 3 months
