

DESC – 8th November 2018

DE NDM Snapshot Report

Objective

- To review whether the DE NDM Snapshot report is useful to shippers with respect to minimising AMR equipment losses at NDM Sample supply points

Background

- During the consultation process for MODs 258 and 258A in 2009 it was identified that a report was required to inform Shippers of supply points within their portfolio, which are part of the current NDM Sample
- The purpose of the report was to help minimise daily meter reading equipment (owned by Xoserve and 3rd parties) being removed from sites following visits from gas meter engineers
- As a result Transporters agreed to Xoserve providing a monthly report to Shippers, which commenced during 2010
- The DE NDM Snapshot report is now provided to Shippers every 2 months but Xoserve is not seeing a reduction in the number of equipment losses

Update

- Do DESC have any views on the report and whether it continues to be of use to Shippers ?, especially as more and more reliance is being placed on Shippers to provide sample data going forwards (UNC Modification 0654)
- Is there a benefit being served by continuing to send this information out to all Shippers ?
- Feedback welcome
