

GCD13 update:

August.2023

GCD13: Update

- Seventeen responses received. Documentation available here:
 - <https://www.nationalgas.com/charging/gas-charging-discussion-gcd-papers>
- **Some of the themes (summarised) raised in the responses (not exhaustive)**
 - Need for compliance with EU Codes (i.e. how TAR NC is incorporated into UK Law)
 - Many acknowledge the issue/influence from Existing Contracts in the charging methodology and its impact to prices but challenging to see precisely what is the best way to address
 - Timing and how long it may take to address - noting that the impact will eventually reduce over time
 - Reviewing or discussing potential change to the 50/50 split mostly supported but a number of concerns / points have been noted as impacts if this were changed
 - Some noting if there are bigger changes, these should be done in parallel
- **Dominating the responses was the need to consider compliance**
 - Noting previous determinations on charging related proposals and the criticality of EU compliance in development and ultimately decisions made by Ofgem.
 - Some options considered might be compliant – could however be challenges of putting it in practise to retain that compliance
