

Extension of the arrangements introduced via UNC Modification 0814

Matt Newman – September TWG

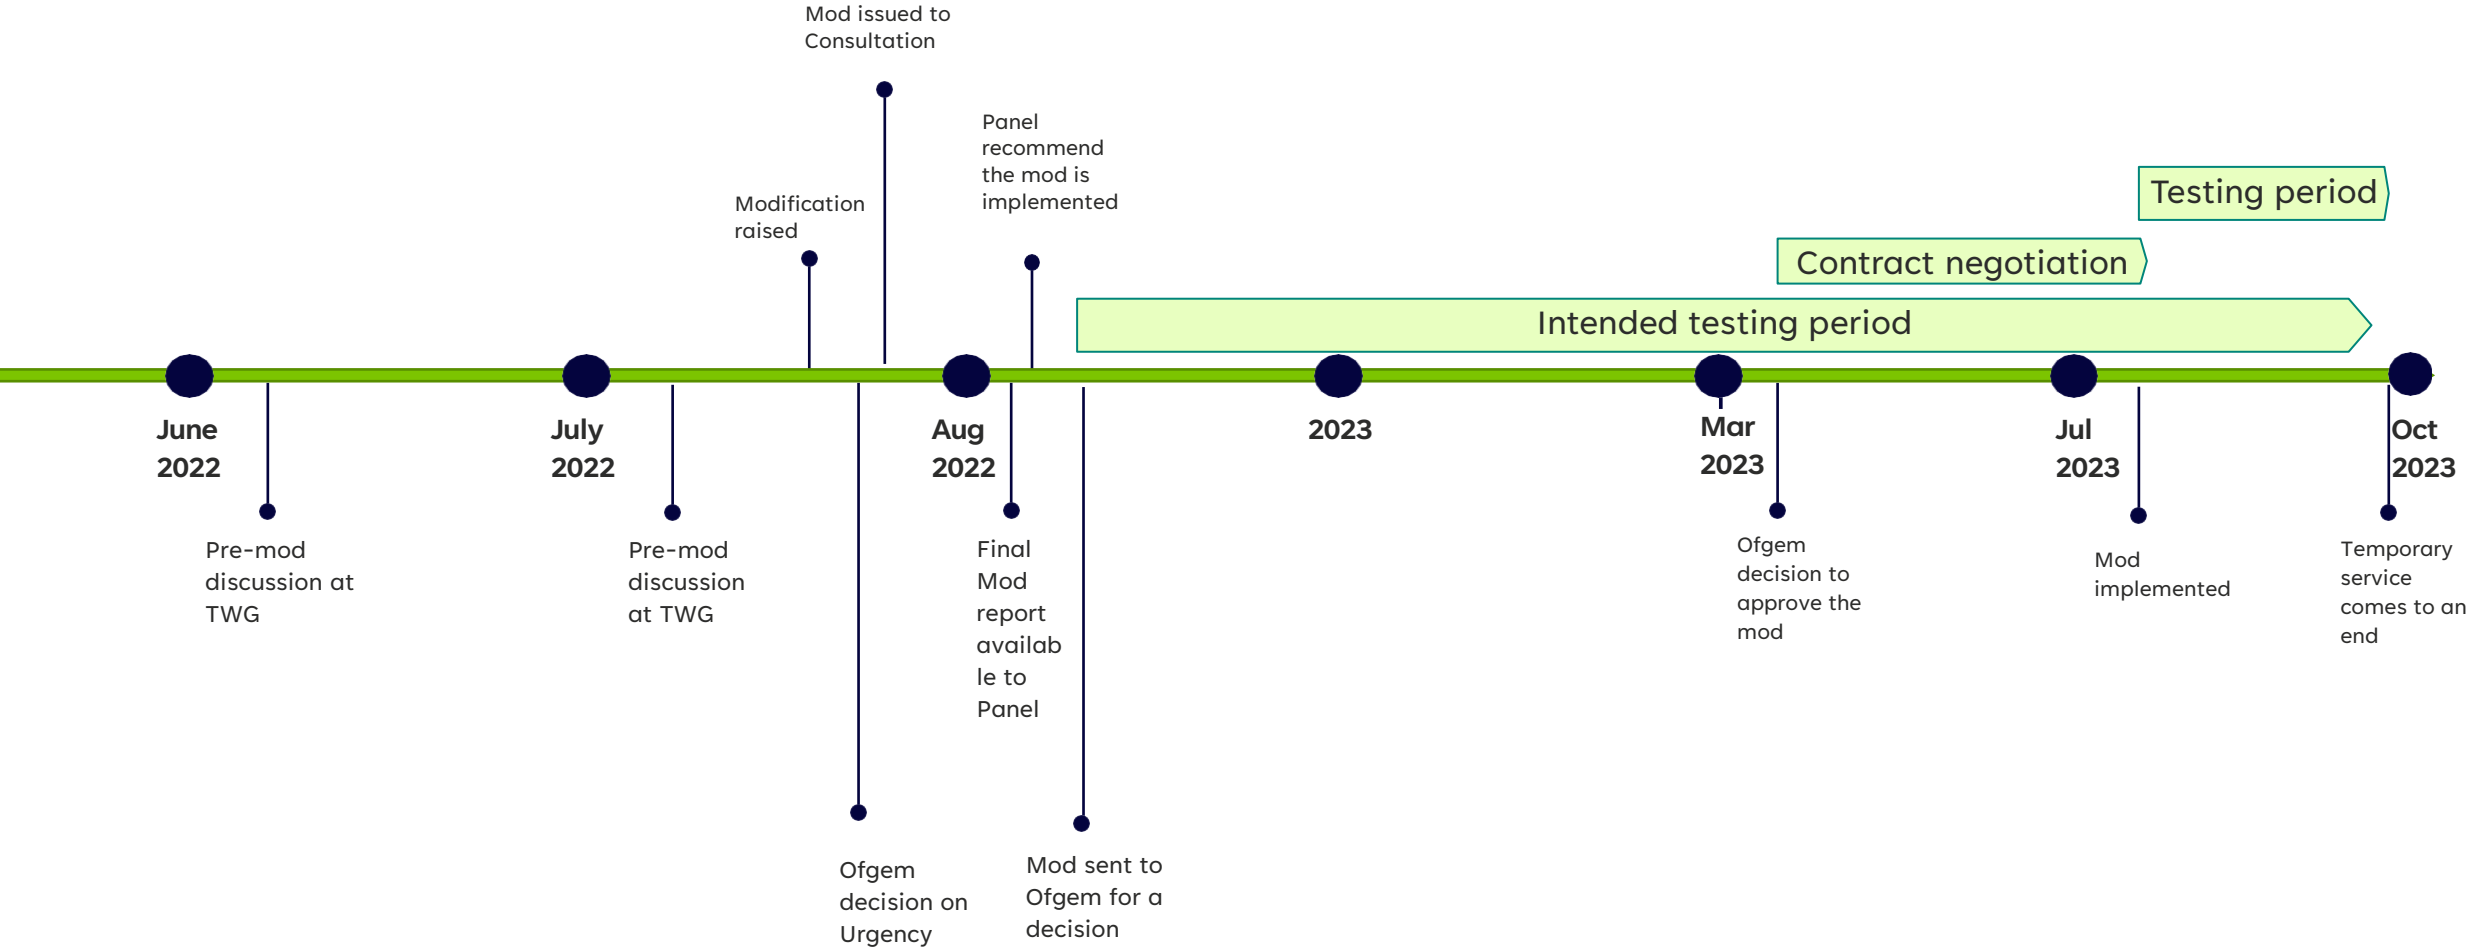

07 September 2023

Background

- An Urgent Enabling Modification [0814](#) was raised in July 2022 allowing BBL to temporarily gain access to the Enhanced Pressure Service and increase their Maximum Network Exit Point Offtake Rate (MNEPOR) via permitting changes to BBLs Interconnector Agreement
- Time limited until 30th September 2023
- Permitting BBL to request enhanced pressures from 55 – 68 bar
- Increasing their MNEPOR from 184,780,632 kWh/d (7,699,193kWh/h) to 252,000,000 kWh/d (10,500,000 kWh/h)
- BBL have not been able to utilise the service due to market conditions and unforeseen delays in implementation

Timeline of UNC0814

What are we proposing to do?

- Extend the temporary arrangements until [31st December 2024] to allow BBL to trial the service and give NGT the opportunity to gather data
- Raise a self governance enabling modification
- Continuing with a time limited solution until data has been obtained which can contribute towards our longer term thinking and understand the impacts
- Aiming to go to September UNC Panel with the recommendation that its directed to consultation
- Do Workgroup support progressing to consultation?

Thank you
