

Faster Switching SCR (REC v3) UNC Update

January 2022

UNC Workgroup / UNC Panel / RDUG

Purpose

- SCR for UNC to align with REC V3
 - Go Live with the Central Switching System
 - Ostensibly to remove Registration from UNC for CSS Sites, but also needs to define rules for ‘association’ of Settlement details to Registration (make ‘Operative’)
 - This version is a minor update to a UNC version which was submitted to Ofgem in March 2021 which was a [minor update] of the UNC version which was submitted to Ofgem 31st March 2020, which was an update of an earlier 2019 version developed following 630WG
 - Amendments in this version were highlighted following a further review conducted by UNC parties which concluded on 6th January 2022
 - This is the FOURTH iteration of the SCR UNC documents that have been circulated via UNC development workgroups but have never been included in an Ofgem consultation

Changes from March 21 SCR Text

- General Terms – D – CDSP and UK Link
 - In March 2021 when the previous version of the SCR drafting was produced a series of questions were subject to discussion between UNC parties and Ofgem, which have now been clarified by policy, so:
 - The Data Permissions Matrix (in the UNC) and the Data Access Matrix in the REC will be discreet documents maintained separately – whereas previous drafting considered commonality
 - The basis upon which the CDSP would release data to parties in accordance with the DAM, can be clarified that this will be as the Gas Enquiry Service Provider where data released is controlled by the DAM, to parties who are subject to the DAM
 - Otherwise, the ‘portfolio’ DSC Core Customer (i.e. Shippers, Transporter and IGT) will continue to receive data from the CDSP, as will any parties where a Code obligation exists to receive this from the CDSP

Changes in this version

- General
 - Joint Office highlighted a number of impacts to the SCR text compiled in March 2021, primarily as a result of:
 - Subsequent Modification implementations amending the baseline UNC against which the SCR will be applied
 - Implemented Modifications where the implementation date of the Modification is not known – the latest version of the SCR text is baselined against the UNC that will be Live at 31st January 2022
 - Implementation issues – such as numbering anomalies - e.g. G5.3.11(c)(ii)(A) should read as 5.3.11(c)(ii)(1)

Not included in the SCR

- UNCVR changes to incorporate the ITR application extracted from 31/03/20 version – *Jan 22 Update: Amendments to UNCVR have been presented to workgroup*
- Draft / agree the CSS / Non CSS UNCC Transitional documentation
- DSC Changes – will be done via the DSC processes
- Modification for Transition – *Jan 22 Update: 0784S Draft WG Report due to be completed in January 2022*
- Modification for adding the Performance Assurance CM function to the DPM
 - *Jan 22 Update – UNC 0762S / IGT UNC 155 implemented 12th July 2021*
