Abstract

SGN fully supports the above Modification Proposal. SGN believes it should help benefit security of supply by helping to maximise gas supplies at a time when there is significant supply uncertainty and supply / demand margins are tight. By helping to maximise gas supplies we would envisage that this should help reduce market uncertainty and price volatility, helping reduce risk of further increases in gas prices. This in turn should help secure effective competition. Furthermore, improved stability and reliability in gas supplies should help Transporters in the economic and efficient planning and operation of the pipe-line system.

I hope these comments are helpful.
