

**Workstream Report**  
**The provision of a “Data Update” to Non Code Parties**  
**Modification Reference Number 0314**  
Version 1.0

This Workstream Report is presented for the UNC Modification Panel's consideration. The Distribution Workstream considers that the Proposal is sufficiently developed and should now proceed to the Consultation Phase.

## **1 The Modification Proposal**

With changes to Suppliers’ Licence obligations in respect of Advanced Metering, it is increasingly clear that there will be a widespread adoption of Advanced/Automated Meter Reading (AMR) equipment and processes by the gas industry. Wider adoption will also be driven by the use of AMR to fulfil energy efficiency requirements of environmental schemes such as the CRC (the CRC Energy Efficiency Scheme, formerly known as the Carbon Reduction Commitment) and the EU ETS (Emissions Trading Scheme).

To support the roll out of AMR, the Energy Services & Technology Association (ESTA) has developed an industry AMR Service Provider Code of Practice (ASPCOP). A number of companies have already signed up to the Scheme and those parties represent the majority of AMR installations undertaken in the UK. As part of the development of the ASPCOP it was recognised that an ASP Hub which would provide information to relevant parties would be beneficial in enabling parties to easily manage Change of Supplier scenarios and avoid Stranding Assets and Multiple Asset installations. This would therefore enhance efficient market operation.

As well as supporting interoperability It is vital that Suppliers know if and where AMR equipment is attached to meters, who operates each AMR device and the contractual relationship for connected devices. This will allow Shippers and their Suppliers and Service Providers to manage compliance with relevant licence conditions.

It is important to understand that unlike other assets the provision of AMR equipment and data services may be provided directly to consumers and that bi lateral contracts may exist for the consumer to purchase services directly from the AMR provider whilst the Supplier or his service provider has in place its own arrangements for accessing data.

The Data Hub will provide a common single point for relevant parties to access critical information to aid their understanding of the arrangements in place at any particular meter.

It is worth noting that unlike the meterpoint to meter relationship the AMR to meterpoint relationship is not based a one to one premise. Multiple AMR units may be attached to one meterpoint. This scenario is already relatively commonplace. Shippers and Suppliers must be aware of any existing arrangements in place for AMR so they can make suitably informed decisions about which AMR operator to

use to provide meter reads.

This information must be available to the Shipper and Supplier at the time of quoting the customer for the gas supply contract as it can materially affect the types of product and prices offered. As the incumbent Supplier is likely to know this information it could be a barrier to competition if this data is not provided to other parties.

As this proposal would only relate to provision of Data Items in relation to Industrial & Commercial sites we do not see any issues arising in respect of the Data Protection Act and Personal Data.

#### Overview

It is therefore Gazprom’s proposal to enable the provision of a set of Data Items to the ESTA MANAGEMENT SERVICES LIMITED to enable the population and maintenance of an AMR Data Hub. While the frequency of the update is subject to further discussion we would envisage a Daily “Data Update” would prove the optimum approach subject to cost information.

For completeness the current list of data items ESTA are proposing to be held in the Hub are set out in the table below.

Those items we are proposing to form part of the “Data Update” are identified in column “Source of Data Item” as “Data Update from xoserve”

	Instances per MPRN	Data Item	Description of Data Item	Source of Data Item
1	S	MPRN	The Unique industry reference point	Data Update from xoserve
2	S	MAM ID	The MDD identifier of the MAM	Data Update from xoserve
3	S	Meter Serial Number (MSN)	The Meter Serial number associated with the Meter	Data Update from xoserve
4	S	Meter Install Date	The Date the Meter was installed	Data Update from xoserve

5	S	Meter Removal Date	The Date the Meter was removed	Data Update from xoserve
6	S	Convertor Serial Number (CSN)	The Serial number associated with the Convertor	Data Update from xoserve
7	S	Convertor Install Date	The Date the Convertor was installed	Data Update from xoserve
8	S	Convertor Removal Date	The Date the Convertor was removed	Data Update from xoserve
9	M	ASP ID	The MDD identifier of the ASP	To be populated by relevant ASP
10	M	AMR Serial Number	The AMR Serial Number associated with the AMR	To be populated by relevant ASP
11	M	AMR Install Date	The Date the AMR was installed	To be populated by relevant ASP
12	M	AMR Removal Date	The Date the AMR was removed	To be populated by relevant ASP
13	M	Contract Relationship	Consumer, Supplier, Transporter, None	To be populated by relevant ASP

Note 1: "Instances per MPRN" identifies data items which can occur only Singularly or in Multiple instances. A Meter could have several AMR devices attached to it so the Hub would have to hold multiple instances of AMR devices.

Note 2: The Contract Relationship identifies the nature of the "active" relationship between the ASP and the relevant party e.g. the ASP could be providing services to the Consumer and this information would allow the Supplier to potentially contract

with the Consumer's ASP for Read Services.

Note 3: ASP ID, AMR Serial Number, AMR Install Date, AMR Removal Date and Contract Relationship are not currently held on existing industry systems.

Gazprom believes the scope of the Data Update, items 1 to 8, is such that the development should not be significant.

### The Proposal

Gazprom propose that the UNC be modified to permit the Transporters to provide data to ESTA MANAGEMENT SERVICES LIMITED subject to a set of Criteria as set out below: -

1. ESTA MANAGEMENT SERVICES LIMITED warrants that the data is being used for legitimate business purposes
2. ESTA MANAGEMENT SERVICES LIMITED indemnifies and holds harmless all Code Parties from the consequence of inappropriate use of the data update.
3. The data provided relates only to I&C meterpoints.

The indemnity set out in 2 will be capped at £2 million.

For the avoidance of doubt the data items which it is proposed that the Transporters be permitted to release to ESTA MANAGEMENT SERVICES LIMITED are:

	Instances per MPRN	Data Item	Description of Data Item
1	S	MPRN	The Unique industry reference point
2	S	MAM ID	The MDD identifier of the MAM
3	S	Meter Serial Number (MSN)	The Meter Serial number associated with the Meter
4	S	Meter Install Date	The Date the Meter was installed
5	S	Meter Removal Date	The Date the Meter was removed
6	S	Convertor Serial Number (CSN)	The Serial number associated with the Convertor
7	S	Convertor Install Date	The Date the Convertor was installed

8	S	Convertor Removal Date	The Date the Convertor was removed
---	---	------------------------	------------------------------------

It is envisaged that, following implementation of this Proposal, ESTA MANAGEMENT SERVICES LIMITED would enter into a separate arrangement with the Transporters to acquire this data and to receive periodic updates.

## 2 User Pays

### a) Classification of the Proposal as User Pays or not and justification for classification

This proposal is not a User Pays proposal as it simply enables the provision of data.

### b) Identification of Users, proposed split of the recovery between Gas Transporters and Users for User Pays costs and justification

No User Pays charges applicable. Some costs may be associated with the release of data however these would be born outside the UNC arrangements and data release does not form part of this Proposal. Transporters have advised the service could be provided under bi-lateral commercial arrangements.

### c) Proposed charge(s) for application of Users Pays charges to Shippers

No User Pays charges applicable to Shippers. Some costs may be associated with the release of data however these would be born outside the UNC arrangements and data release does not form part of this Proposal.

### d) Proposed charge for inclusion in ACS – to be completed upon receipt of cost estimate from xoserve

No charges applicable for inclusion in ACS. Some costs may be associated with the release of data however these would be born outside the UNC arrangements and data release does not form part of this Proposal.

## 3 Extent to which implementation of the proposed modification would better facilitate the relevant objectives

**Standard Special Condition A11.1 (a): *the coordinated, efficient and economic operation of the pipe-line system to which this licence relates;***

Implementation would not be expected to better facilitate this relevant objective.

**Standard Special Condition A11.1 (b): *so far as is consistent with sub-paragraph (a), the (i) the combined pipe-line system, and/ or (ii) the pipe-line system of one or more other relevant gas transporters;***

Implementation would not be expected to better facilitate this relevant objective.

**Standard Special Condition A11.1 (c): *so far as is consistent with sub-paragraphs (a) and (b), the efficient discharge of the licensee's obligations under this licence;***

Implementation would not be expected to better facilitate this relevant objective.

**Standard Special Condition A11.1 (d): *so far as is consistent with sub-paragraphs (a) to (c) the securing of effective competition: (i) between relevant shippers; (ii) between relevant suppliers; and/or (iii) between DN operators (who have entered into transportation arrangements with other relevant gas transporters) and relevant shippers;***

This Modification Proposal will facilitate the reduction of costs associated with the change of supplier process where AMR is installed on I&C sites, by ensuring the incoming supplier has visibility of the equipment and commercial arrangements on site.

This Modification Proposal will allow improvements in the efficiency of the process for managing the installation of AMR equipment on I&C sites, by notifying suppliers whether AMR is already installed.

**Standard Special Condition A11.1 (e): *so far as is consistent with sub-paragraphs (a) to (d), the provision of reasonable economic incentives for relevant suppliers to secure that the domestic customer supply security standards (within the meaning of paragraph 4 of standard condition 32A (Security of Supply – Domestic Customers) of the standard conditions of Gas Suppliers' licences) are satisfied as respects the availability of gas to their domestic customers;***

Implementation would not be expected to better facilitate this relevant objective.

**Standard Special Condition A11.1 (f): *so far as is consistent with sub-paragraphs (a) to (e), the promotion of efficiency in the implementation and administration of the network code and/or the uniform network code.***

Implementation would not be expected to better facilitate this relevant objective.

**4 The implications of implementing the Modification Proposal on security of supply, operation of the Total System and industry fragmentation**

No implications on security of supply, operation of the Total System or industry fragmentation have been identified.

**5 The implications for Transporters and each Transporter of implementing the Modification Proposal, including:**

**a) implications for operation of the System:**

No implications for operation of the system have been identified.

**b) development and capital cost and operating cost implications:**

No development or capital costs would be incurred. Some costs may be associated with the release of data however these would be born outside Code arrangements.

**c) extent to which it is appropriate to recover the costs, and proposal for the most appropriate way to recover the costs:**

No additional cost recovery is proposed.

**d) Analysis of the consequences (if any) this proposal would have on price regulation:**

No such consequence is anticipated.

**6 The consequence of implementing the Modification Proposal on the level of contractual risk of each Transporter under the Code as modified by the Modification Proposal**

No such consequence is anticipated.

**7 The high level indication of the areas of the UK Link System likely to be affected, together with the development implications and other implications for the UK Link Systems and related computer systems of each Transporter and Users**

No changes to systems would be required as a result of implementation of this Proposal.

**8 The implications of implementing the Modification Proposal for Users, including administrative and operational costs and level of contractual risk**

***Administrative and operational implications (including impact upon manual processes and procedures)***

Facilitating access to a central source of information will enhance the efficiency of Suppliers processes in particular around the Change of Supplier process.

***Development and capital cost and operating cost implications***

No such costs have been identified.

***Consequence for the level of contractual risk of Users***

No such consequence has been identified.

**9 The implications of implementing the Modification Proposal for Terminal Operators, Consumers, Connected System Operators, Suppliers, producers and, any Non Code Party**

This Modification Proposal should help to ensure that AMR providers offer appropriate services in an efficient manner by allowing visibility of equipment installed on site.

**10 Consequences on the legislative and regulatory obligations and contractual relationships of each Transporter and each User and Non Code Party of implementing the Modification Proposal**

No such consequences have been identified.

**11 Analysis of any advantages or disadvantages of implementation of the Modification Proposal**

**Advantages**

- Implementation of this Modification Proposal will help to ensure effective supply competition is maintained when AMR is widespread in the I&C market.
- Assuming the data will be available to all interested parties this Modification Proposal will ensure interested parties can access an accurate record of what AMR devices are installed at a meterpoint.
- Some workstream members consider the Modification Proposal facilitates open access to data, which will be beneficial to all parties.

**Disadvantages**

- Some workstream members considered the Modification Proposal offers a risk on the control of data once provided to ESTA eg on which users can view which data.

**12 Summary of representations received (to the extent that the import of those representations are not reflected elsewhere in the Workstream Report)**

No written representations have been received.

**13 The extent to which the implementation is required to enable each Transporter to facilitate compliance with safety or other legislation**

No such requirement has been identified.

**14 The extent to which the implementation is required having regard to any proposed change in the methodology established under paragraph 5 of Condition A4 or the statement furnished by each Transporter under paragraph 1 of Condition 4 of the Transporter's Licence**

No such requirement has been identified.

**15 Programme for works required as a consequence of implementing the Modification Proposal**

No programme for works has been identified.

**16 Proposed implementation timetable (including timetable for any necessary information systems changes)**

Implementation could be immediate on receipt of a decision.

**17 Implications of implementing this Modification Proposal upon existing Code Standards of Service**

No implications of implementing this Modification Proposal upon existing Code Standards of Service have been identified.

**18 Workstream recommendation regarding implementation of this Modification Proposal**

The Distribution Workstream considers that the Proposal is sufficiently developed and should now proceed to the Consultation Phase.
