

MOD0700 – PARR Reports

Scope of MOD700 Requirements

Changes required to existing PARR reports

Reads in scope for MOD0700

- Larger Supply Points (EUC2-9) are not subject to Mod 0700 rules
- All Replacement and Opening meter readings [and readings with a non zero RTC] (for all EUCs) are not subject to Mod 0700 rules.

UBR Status

*D = Read Date

New/Existing	Status	Status Description	Comments
Existing	F	Validation Failed	This will now be used pre validation to reject reads that are older than *D+10.
Existing	S	Suspended	
Existing	P	Pending for Upload	
Existing	U	Uploaded	
New	E	Pending for Upload	Reads pending for upload that have been filtered for MOD0700 specific validation.
New	A	Assured	Read within batch has been accepted. All other reads are considered to be assured.
New	N	Not Assured/Unassured Read	Two reads within batch have been rejected. All other reads are considered to be unassured.

Scenario 1: First Read Accepted

*D = Read Date

Read Submission

Read Staging

Shipper Submits Batch of Reads

All Reads Older than D+10 Rejected and marked as "F"

All reads that are within D+10 will wait for read validation

1. One read will be selected and in this scenario is accepted, all other reads are marked as assured.

F = Rejected

E = Pending for Upload

U = Uploaded/Accepted

A = Assured

N = Not assured

Scenario 2: First Read Failed, Second Read Accepted

Read Submission

Read Staging

Shipper Submits Batch of Reads

All Reads Older than D+10 Rejected and marked as "F"

All reads that are within D+10 will wait for read validation

1. The first selected read, fails read validation and marked as F (Rejected)
2. The second selected read, has passed validation and marked as U (Accepted) , all other reads marked as Assured

F = Rejected

E = Pending for Upload

U = Uploaded/Accepted

A = Assured

N = Not assured

Scenario 3: Two Selected Reads Fail

Read Submission

Read Staging

Shipper Submits Batch of Reads

All Reads Older than D+10 Rejected and marked as "F"

All reads that are within D+10 will wait for read validation

1. The first selected read, fails read validation and marked as F (Rejected)
2. The second selected read, has failed validation and marked as F (Rejected) , all other reads marked as Not Assured

F = Rejected
E = Pending for Upload
U = Uploaded/Accepted
A = Assured
N = Not assured

Implementation Impacts to PARR reports

- Implementation date of MOD is the Saturday 28th September.
- Reads submitted after September 28th will be subject to the new read status. Therefore October's reports (reporting September performance) will be impacted.
- Given the timeframes of the MOD, its proposed that any necessary amendments are made by October to take effect in November's reports.

Review of PARR Reports

Report Name	Impacted
Estimated and Check Reads (Class 1 and 2 Only)	N
No Meter Recorded in Supply Point Register	N
No Meter Recorded and Data Flows Received	N
Shipper Transfer Read Performance	N
Read Performance	Y
Meter Read Validity Monitoring	Y
No Reads for 1,2,3 or 4 Years Class X	N
AQ Correction By Reason Code	N
Standard Correction Factors for Sites in EUC Band 4 and Above	N
Replaced Meter Reads (Split by EUC Band)	N

Initial impact assessment suggests only 2 reports that could be impacted by the new read status (Orange above)

PARR Reports Recommendations

Read Performance Report

- To include Accepted (U) and Assured (A) reads, in order to fairly reflect read performance for Shippers submitting anything greater than daily batches

Meter Read Validity Monitoring Report

- To exclude new status, as the report purpose is to display only reject reads and the associated rejection code (where applicable)
- Reads that are Not Assured (N) do not have a rejection code and therefore cannot be reported
