Abstract

Julian / Mike

Further to the discussion at Mod Panel yesterday, please take this note as our formal withdrawal of the following Modification Proposals:-

516: "Transco Self query where there appears to be no Meter Asset detail Held on Sites and Meters";

517: "Removal of MPRNs where no physical asset has been fitted", and

518: "Recovery of transportation and energy charges erroneously paid where no physical asset has been fitted at the supply meter point".

This is on the understanding that :-

- 1) the now established process for withdrawing from a supply point where no meter asset is present will be reviewed over the next few months when greater volumes of transactions will have been subjected to the procedures and
- 2) that the need for the continuance of these arrangements will be raised as an issue within the current discussion of processes outside Network Code considered by the Agency Workgroup on Separation of Distribution Networks.

Unfortunately, these Mods do not appear on Nemesys to enable withdrawal on the system.

Please let me know if you require any further information.

Regards
Mike
