

## TRANSCO NETWORK CODE MODIFICATION PROPOSAL No. 0493

"Removal of nomination process for new and existing NDM supply points"

## Version 1.0

**Date:** 17/09/2001

**Proposed Implementation Date:**

**Urgency:** Non-Urgent

## Justification

When the Utilities Act gains Royal assent later this year supply points will be designated as domestic based on the status and use of the premises rather than volume based designation for domestic customers as used by Transco. The situation will then arise whereby some domestic customer transfers will have to go through the full nomination and confirmation process when transferring shippers. This renders a volume based threshold for the requirement of nomination for NDM supply points unnecessary and arbitrary.

The requirement to nominate is therefore unnecessary and only delays the transfer process. By removing the requirement on shippers to nominate any NDM supply points the transfer process could be simplified.

## Nature of Proposal

This proposal is intended to remove the requirement of shippers to nominate existing NDM sites. All NDM sites could change shipper through a Confirmation only process, which would simplify the transfer process. In order to maintain the process for DM sites the AQ threshold for the requirement of a nomination could be raised to [58,600,000] kWh.

Data quality will be maintained through the confirmation process and by the relationship between shippers their suppliers and their Meter asset managers.

## Purpose of Proposal

The proposal will make the transfer process for NDM sites easier and enable existing supply points, which are above the 73200 kWh threshold to benefit from the same process as those sites under the threshold.

### Consequence of not making this change

Supply points that are designated as domestic will have to go through the full Supply point Administration process of nomination and confirmation if they have an AQ of 73,200 kWh or above.

### Area of Network Code Concerned

G2 &amp; G3
