

Current Arrangements

Enabling/Transition Modifications

Modifications to Establish Revised Settlement Arrangements

Existing Settlement Regime – utilising current UK Link systems and functionality:
Annually calculated AQ;
Reconciliation by Difference based on portfolio and customer type banding;
Restrictions on meter read volumes;
Continued support of DMV service by Transporters.

CSEP NExA - sets arrangements between large transporter and iGT:
Bilateral arrangements;
Identifies information to be provided by parties;
Very limited Shipper involvement;
No common portfolio arrangements.

AUG Process – established process for the allocation of unidentified gas utilising an independent expert.

Retrospective Updates - Current systems have limited update functionality:
Utilise CMS process;
Limited to SRV and USRV process.

Modification 0527 – identifies requirements relating to Annual Quantity ‘backstop’ calculation to enable an orderly and efficient transition to Modification 0432

Modification 0528V – identifies arrangements relating to ‘core’ provisions to enable an orderly and efficient transition to the regime identified Modification 0432

Modification 0515S – establishes transitional timescales for Transporter (SRV) and User (USRV) resolution following the Project Nexus Implementation Date

Modification 0467 – Amends Annex A of the LDZ CSEP NExA to require iGTs to participate in a data preparation exercise to enable implementation of Modification 0440

Modification 0578 – Implements transitional arrangements for invoice adjustments until Modification 0434 is implemented

Enabling Modifications

0531 – establishes additional test environments;
0532 – sets out requirements for ‘non-effective days’ to enable the efficient transition;
0548 – changed the Nexus Implementation date to 01 October 2016;

Modification 0432 – introduces new settlement regime utilising UK Link replacement system functionality, including :
New Product Classes 1 to 4 with more options for submitting meter read information;
Monthly calculation of AQ;
Individual Meter Point Reconciliation.
Implementation: Project Nexus Implementation Date (planned as 01 October 2016)

Modification 0440 – enables iGTs to use the Transporters Agent Xoserve to administer Supply Points downstream of the LDZ CSEP:
Removes CSEP NExA;
Allows the use of common processes;
Increases Panel Membership

Modification 0473 – establishes an energy allocation process to enable an appropriate distribution of Unidentified Gas:
Includes a transitional process from existing arrangements to post Nexus implementation and then established regime.

Modification 0434 – allows retrospective changes to:
Meter Information, Meter Readings, relevant Supply Point and Address data.
This modification is to be implemented at a date to be advised, this is likely to be 12 months after the Project Nexus Implementation Date
