

UNC Modification - Further Scenario - Requiring an Estimate at Code Cut Off Date

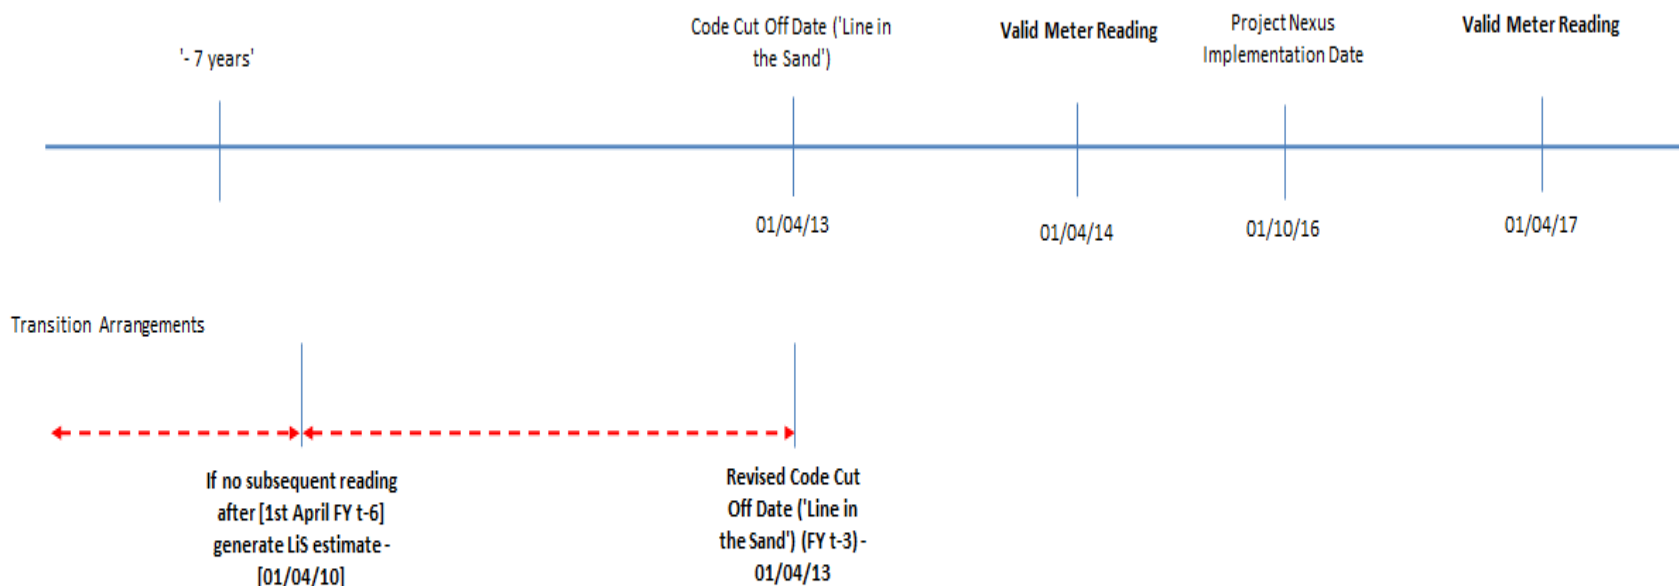

12th July 2016

- During Modification 0576 we highlighted that another scenario existed where a Line in the Sand / Code Cut Off Estimate might be required
 - At the PNUNC Meeting in May we discussed this scenario.
 - Preliminary view of the PNUNC meeting was that this reading was not needed at this time.
 - Impact potentially as this would restrict retrospective asset replacement – this should be considered as part of this.
 - The meeting referred this to the Data Management Workgroup.
 - Outcome of this group was to concur with the recommendation not to estimate these readings at this time.
 - The July PNUNC is asked to note this recommendation NOT to raise a UNC Modification at this time.

respect > commitment > teamwork

- Where no readings exist in the period 1st April FY t-6 to 31st March FY t-4 then the first meter reading post the Code Cut Off will be the earliest point that a retrospective reading can be replaced. Only Readings that are recorded can be replaced.
- In the absence of a LiS reading, any retrospective asset update could not be earlier than the 'first' Valid Reading.
