

## PROPOSAL FOR REVIEW

### DEVELOPMENT OF ALLOCATION ARRANGEMENTS AT THE METER POINT

Date: 9th April 1996

Proposed Implementation

Date: To be agreed

The current regime allows shippers to have shared supply meter points with end users by electing to have a "lead shipper" act as a facilitator for the allocation. However, a number of parties believe that a more transparent and flexible regime would be for TransCo to facilitate these arrangements. This review would investigate the implications of this and then formulate proposals, if appropriate.

#### AREA OF NETWORK CODE CONCERNED

##### G 1.7 Shared Supply Meter Points

#### NATURE OF PROPOSAL

To consider the proposal further, a review group needs to be set up to examine the following areas:-

1. The market need for allocation agreements and to which market sectors they should be available.
2. Type of allocations available (Tranche/Percentage/variable)
3. Consultation with relevant parties.
4. Timescales required to ensure implementation.
5. Systems implications to the change in UK LINK.

The core concept to be developed is to facilitate the extension of the terms in section G1.7 of the principal document for existing shared supply meter points to all supply points.

#### PURPOSE OF PROPOSAL

This proposal would better facilitate the relevant objective of encouraging competition between suppliers.

PROPOSER : John Lockett  
POSITION : Commercial Manager - Network Code  
COMPANY : British Gas TransCo
