

SSP Adjustments Smart Meter Installs

07 April 2018

SSP and LSP adjustments

- Noted anecdotally in review group 0624R that the number of consumption adjustments post Nexus was largely static at pre-Nexus levels despite opening of SSP adjustments following Nexus delivery.
- Further information required for PAC?

Adjustments and theft

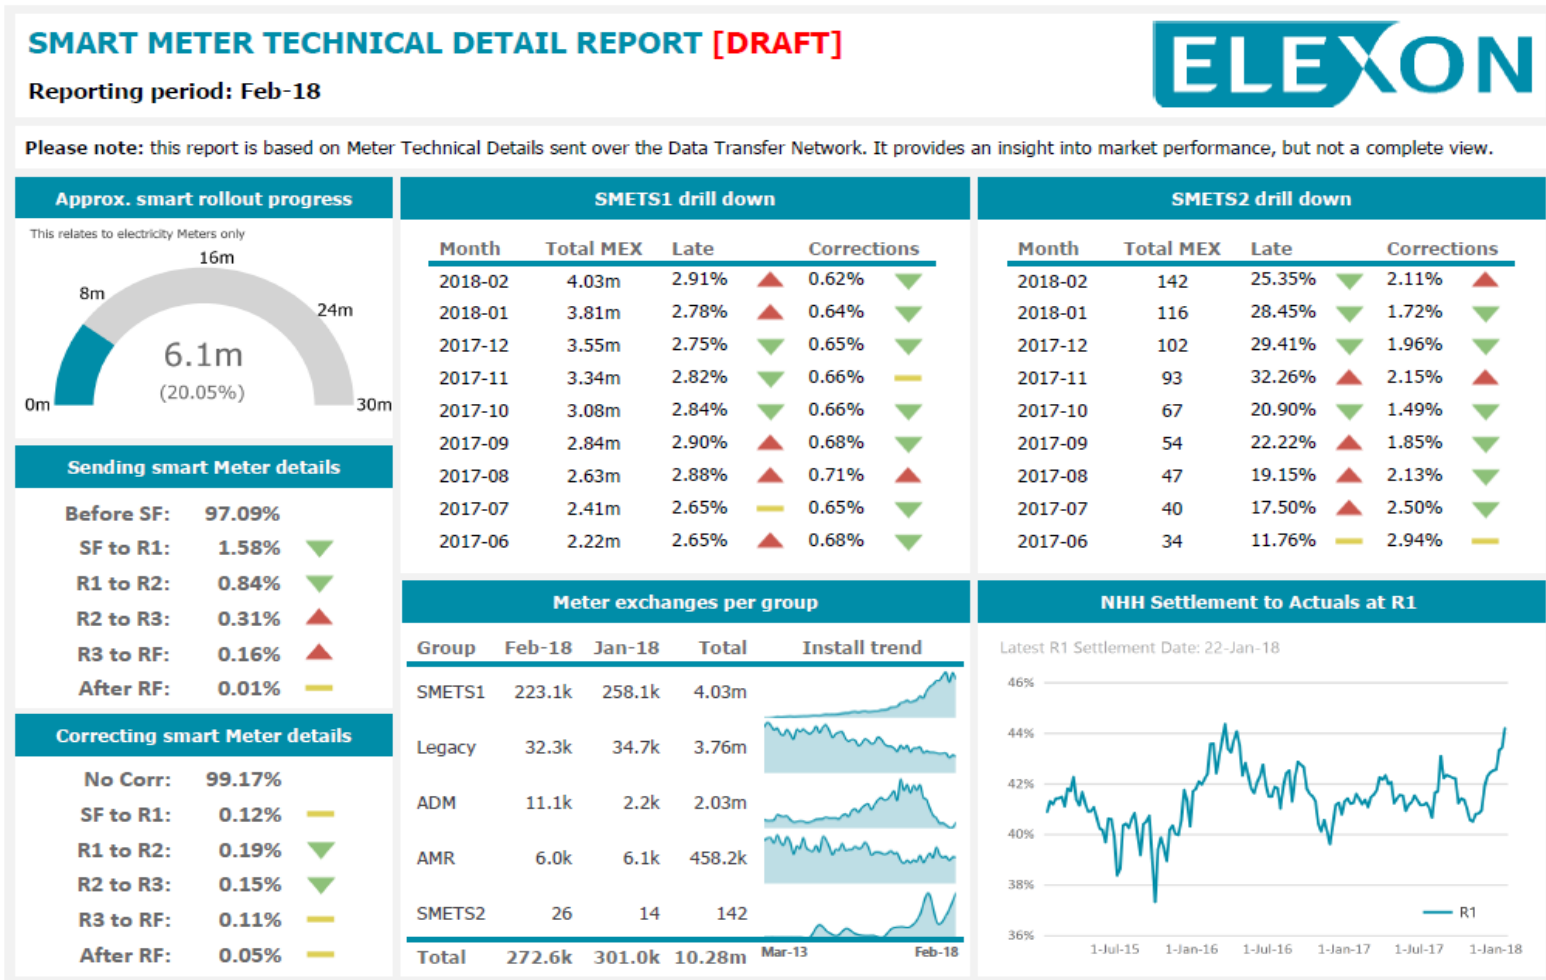

- Theft consumption adjustments are mandatory in the UNC.
- AQ corrections following theft identification are not mandatory.
- To be considered when data is forthcoming (schedule 2)?

Smart meter installs

- Electricity PAB are monitoring the risk to settlements of smart meter roll-out.
- The process in electricity means that the supplier is now required to send updates, providing more reason to track.
- Process is different in gas, but requires shipper update. Should a similar risk be considered? (number of installs will be comparable).
- If so, how do we achieve the type of reporting required?

Smart meter installs – Elexon reporting in electricity

- Smart meter technical detail report a useful Elexon dashboard that helps track the risk for PAB.
- Does PAC need something similar?
