Action DE1052

Changes to calculation of Daily Adjustment Factor (DAF)

DESC 20th January 2009

Action DE1052: Change to calculation of DAFs

- <u>DESC ACTION</u>: Potential changes to DAFs – xoserve to confirm with the DNs whether a UNC Modification will be required

- DAF provides view of EUC weather sensitivity compared with LDZ's

- Formula: <u>WSENS / SND (for EUC)</u>
  WSENS / SND (for agg. NDM in LDZ)

- Numerator values (EUC) derived from NDM sample
- Denominator values (LDZ) currently supplied by Networks forecasting processes.
- <u>Proposal</u>: Use historical NDM model for denominator (detail Nov '08 DESC)
- No objections from Transporters to using historical data as opposed to a forecast view
- New method included in "Spring Approach 2009"
