Dear Bob,

Modification Proposal 0297

Thank you for providing SSE, with the opportunity to comment on the above Modification Proposal.

SSE is supportive of proposal 0297.

We believe it will help improve the quality of metering data which will also have a beneficial effect on improving the quality of meter reading data, by enabling the MAM to verify the accuracy of the details stored centrally. Consequently it should promote efficiency by reducing the number of requests for this information being made to Shipper/Suppliers.

It would also seem sensible to align the information provision processes in the gas industry with those of the electricity industry in order to avoid discrepancies between the two.

If any Transporter Agency costs related to providing this information are incurred, we agree with the proposer that it would be appropriate for the Registered Metering Applicant to be liable for these costs.

Please do not hesitate to give me a call if you wish to discuss this further.

Yours sincerely

Martin Brandt
