

# Seasonal Normal Review Update

DESC 5<sup>th</sup> February 2010

# Seasonal Normal Review - Implementation

---

- Revised Composite Weather Variables and Seasonal Normal Values currently being applied to derive revised EUC and historical aggregate NDM demand models
  - Equivalent to those derived in Spring 2009 using new CWV and SNCWV
- Parameters to be used in calculation of WAALP values will be based on these revised models as per UNC H3.4.3
- Revised values of ALPt, DAft, EWCft, used to compute revised daily WAALPs will be made available to shippers via UK Link docs in Spring
- Note: For gas year 2009/10 only the ALPt and DAft can initially be published. Values of EWCft for gas year 2009/10, can only be made available in stages – EWCF depends on actual weather on the day.

## Seasonal Normal Review – Further Discussions

---

- Transporters agreed at December DESC to continue discussions with shippers during 2010 on SN basis
- xoserve in discussions with Transporters and Shippers in order to understand how Seasonal normal review process can move forward to the satisfaction of all parties
- DESC meeting dedicated to Seasonal Normal will be added to 2010 schedule once further update is available.
