Clarification on Slide 21 Technical Forum material

DESC 24th July 2009

Action TF1064: Clarification on Slide 21

Technical Forum material

- DESC ACTION:
“xoserve to provide update note to DESC clarifying smoothed model results for Band 01B for domestic only model and model including non domestic sites as shown on slide 21”
- Slide 21 displayed two sets of smoothed model results for Band 0-73.2 MWh p.a:
 - Domestic Only and Domestic including some non domestic
 - Results indicated weekend factors are more positive using Domestic only model and therefore Domestic only model retained
- Question raised by E.On at T.F regarding potential comparison of NDM sample consumption versus allocation based on ALPs & DAFs derived from sample data including non domestics
 - Possible to replicate Demand Attribution using the E.On suggestion and compare to allocation from traditional domestic only model
 - Work plan for 2009 is already full with Seasonal Normal review activities
 - Analysis could be added to 2010 work plan (TBC) – discuss and review at January 2010 DESC
