2.3.3 Distribution Network (NTS) Exit Capacity Charge (ECN)	7

1 Introduction

This publication gives Notice of the LDZ transportation charges expected to apply from 1 April 2020 for the use of Scotland Gas Networks gas distribution network, as required by Standard Special Condition A4 of the Gas Transporter Licence. This document does not override or vary any of the statutory, licence or Network Code obligations upon Scotland Gas Networks.

For more information on the charges set out in this document, please contact via email: - pricing.team@sgn.co.uk

2 Transportation Charges to Apply from 1 April 2020

2.1 LDZ System Charges

The standard LDZ system charges consist of capacity and commodity charges with separate functions for directly connected supply points and for Connected System Exit Points (CSEPs). As set out in DNPC08, with effect from 1 April 2012 the separate functions for CSEPs ceased and the same charges apply to CSEPs as to directly connected supply points.

Where the LDZ charges are based on functions, these functions use Supply Point Off take Quantity (SOQ) in the determination of the charges. At Class 1 and 2 (daily metered) supply points the SOQ is the registered supply point capacity. For Class 3 and 4 (non-daily metered) supply points, the SOQ is calculated using the supply point End User Category (EUC) and the appropriate load factor.

2.1.1 Directly Connected Supply Points and CSEPs

The unit charges and charging functions used to calculate charges to directly connected supply points and CSEPs are set out below.

LDZ System Charge Codes-Directly Connected Supply Points and Connected System

Directly Connected		CSEPS	
Invoice	Charge Code	Invoice	Charge Code
LDZ Capacity	ZCA	Capacity	891
LDZ Commodity	ZCO	Commodity	893

LDZ System Capacity Charges-Directly Connected Supply Points and Connected Systems

Charge Band (kWh/annum)	Capacity p/peak day kWh/day
Up to 73,200	0.2271
73,200 to 732,000	0.2044
>732,000 kWh	$1.3195 \times \text{SOQ}^{-0.2338}$
Subject to a minimum rate of	0.0100
Minimum reached at SOQ of	1,173,086,869 kWh

LDZ System Commodity Charges-Directly Connected Supply Points and Connected Systems

Charge Band (kWh/annum)	Commodity p/kWh
Up to 73,200	0.0333
73,200 to 732,000	0.0297
>732,000 kWh	$0.2431 \times \text{SOQ}^{-0.2597}$
Subject to a minimum rate of	0.0015
Minimum reached at SOQ of	322,581,594 kWh

2.1.2 CSEPs Charging

LDZ System charges for transportation to Connected System Exit Points (CSEPs) are identical to those for transportation to direct loads.

In the calculation of the LDZ charges payable for CSEPs, the unit commodity and capacity charges are based on the supply point capacity equal to the CSEP peak day load for the completed development irrespective of the actual stage of development.

The SOQ used is therefore the estimated SOQ for the completed development as provided in the appropriate Network Exit Agreement (NExA). For any particular CSEP, each shipper will pay identical LDZ unit charges regardless of the proportion of gas shipped. Reference needs to be made to the relevant NExA or CSEP ancillary agreement to determine the completed supply point capacity.

2.1.3 Optional LDZ Charge

The optional LDZ tariff is available, as a single charge, as an alternative to the standard LDZ system charges. This tariff may be attractive to large loads located close to the NTS. The rationale for the optional tariff is that, for large Network loads located close to the NTS or for potential new Network loads in a similar situation, the standard LDZ tariff can appear to give perverse economic incentives for the construction of new pipelines when Network connections are already available. This could result in an inefficient outcome for all system users.

The charge is calculated using the function below:

Invoice	Charge Code	p/peak day kWh/day
CAZ	881	$902 \times [(\text{SOQ})^{-0.834}] \times D + 772 \times (\text{SOQ})^{-0.717}$

Where (SOQ) is the Registered Supply Point Capacity, or other appropriate measure, in kWh per day and D is the direct distance, in km, from the site boundary to the nearest point on the NTS. Note that ^ means “to the power of ...”

Further information on the optional LDZ tariff can be obtained from the pricing team via email at

pricing.team@sgn.co.uk

2.2 LDZ Customer Charges

For supply points with an AQ of less than 73,200 kWh per annum, the customer charge is a capacity charge. For supply points with an AQ between 73,200 and 732,000 kWh per annum, the customer charge is made up of a fixed charge which depends on the frequency of meter reading, plus a capacity charge based on the registered supply point capacity (SOQ).

For supply points with an AQ of over 732,000 kWh per annum, the customer charge is based on a function related to the registered supply point capacity (SOQ).

The unit charges and charging functions used to calculate customer charges to directly connected supply points are as follows:

LDZ Customer Capacity Charges

Charge Code	CCA
Charge Band (kWh/annum)	p/peak day kWh/day
Up to 73,200	0.1299
73,200 to 732,000	0.0042
>732,000 kWh	$0.0875 \times \text{SOQ}^{-0.2100}$

In addition to the above, the following fixed charge applies to supply points with an AQ between 73,200 and 732,000 kWh:

LDZ Customer Fixed Charges

Charge Code	CFI
Supply Point Fixed Charge	Fixed Charge p/day
Non-monthly read	35.8982
Monthly read	38.2238

2.3 Other Charges

Other Charges include administration charges at Connected System Exit Points, Shared Supply Meter Points and Interconnectors.

2.3.1 Connected System Exit Points

A CSEP is a system point comprising one or more individual exit points which are not supply meter points. This includes connections to a pipeline system operated by a Gas Transporter other than Scotland Gas Networks.

The calculation of LDZ charges payable for shipping to CSEPs is explained in section 2.1.2.

2.3.2 LDZ System Entry Commodity Charge

The methodology relating to Distributed Gas Charging Arrangements as set out in Uniform Network Code Modification 0391 and approved by Ofgem in September 2012 and implemented from 1st April 2013. The LDZ System Entry Commodity Charge reflects the operating costs associated with the entry of the distributed gas and the benefits in terms of deemed NTS Exit and distribution network usage. The rate associated with the LDZ System Entry Commodity Charge is calculated on a site by site basis.

LDZ System Entry Commodity Rate

Site Name	GEMINI Reference	Distributed Gas Commodity Rate(p/kWh)
Aberdeen Conference Centre	TECAOS	0.0638 (credit)
Crofthead Farm	CROFOS	0.0781 (credit)
Beyside Port Gordon	POG2OS	0.0638 (credit)
Grissan Girvan	GIR1 / GIR2	0.0001 (credit)
Mains of Keithnick	COUPOS	0.0781 (credit)
Grissan Riverside	RIVEOS	0.0640 (credit)
Charlesfield St Boswells	BOSWOS	0.0779 (credit)
Dunnswood Road Cumbernauld	DUNNOS	0.0780 (credit)
East Memus Farm	CARNOS	0.0781 (credit)
Foveran / Savock Farm	FAVROS	0.0779 (credit)
Moray Hill Farm / Tornagrain	MORYOS	0.0637 (credit)
Peacehill Farm	PEACOS	0.0638 (credit)
Peterhead	DOWNOS	0.0639 (credit)
Port Gordon Portside	POG1	0.0638 (credit)
Tambowie Farm	TAMBOS	0.0780 (credit)
Skeddoway Farm	SKEDOS	0.0779 (credit)
Strathcathro	STRCOS	0.0638 (credit)
Tornagrain 2	MOR2	0.0001 (credit)
Oban LNG Medium Pressure	OBIG	0.0466 (credit)
Campbeltown LNG Low Pressure	CAM1	0.1435 (credit)
Thurso LNG Medium Pressure	THU1	0.0535 (credit)
Wick LNG Medium Pressure	WIC1	0.0559 (credit)

SGN are aware of new DN entry points that are progressing through their engineering development these may require new DN entry rates to be published within the charging period.

2.3.3 Distribution Network (NTS) Exit Capacity Charge (ECN)

Following the implementation of Uniform Network Code Modification 0195AV industry arrangements for the charging of NTS Exit Capacity costs changed on the 1st October 2012. National Grid Transmission will invoice gas Distribution Networks (DNs) for booked NTS Exit Capacity and DN's will invoice gas shippers in line with DNPC06 ("Proposals for LDZ Charges to Recover NTS Exit Capacity Charges). Ofgem have set an allowance for Scotland Gas Networks to recover costs associated with NTS Exit Capacity charges.

Exit Capacity Charges relating to SIU's:

The four Scottish Independent Networks located at Oban (LO), Thurso (LT), Wick (LW) and Campbeltown (LC) are classified as distinct Exit Zones within the Sites and Meters database although the NTS Exit Capacity is now booked at the Isle of Grain following the closure of both Avonmouth and Glenmavis NTS LNG Offtakes. The ECN rates for the four SIU Exit Zones reflect the distinct network at Stranraer is also classified as a separate Exit Zone (LS) within the Sites and Meters database.

The ECN charges for Scotland Gas Networks are detailed in the table below:

Invoice	Charge Code
LDZ Capacity	ECN

Exit Zone	ECN Charge Rate (p/peak day/kWh/day)
SC01	0.0002
SC02	0.0002
SC04	0.0002
LC	0.0002
LO	0.0002
LT	0.0002
LW	0.0002
LS	0.0022
