### Observations:

- Work with the CAMs has enabled the PAC to identify that in general, the spikes are due to Shipper’s cleansing their portfolio.
- The number of replaced meter reads has generally been trending downwards across all EUC bands over the last few months.

## 2A.11 Sites above Class 1 threshold not in Class 1

The report measures the number of sites meeting or approaching or have reached the criteria for re-confirmation as Class 1 as set out in UNC G2.3.15b

2A.12 AQ at Risk - Monthly no SMART industry average

2A.12a Distribution of AQ read performance for PC4 Monthly sites no SMART - 12 month average

## Observations:

- Industry average remains below target of 90%
  - A number of Shippers are operating below target (based on 12 month average).
- The decline in December performance is due to the correct logic being applied on the AQ Read Performance reports on the Data Discovery Platform (DDP).
  - On average, Shippers within the market have seen c. -23% decline due to logic update.

# 2A.12b AQ Read performance – PC4 Monthly SMART

The report measures the percentage of monthly read AQ for sites <293,000 with SMART/AMR

## Observations:

- The decline in December performance is due to the correct logic being applied on the AQ Read Performance reports on the Data Discovery Platform (DDP).
  - On average, Shippers within the market have seen c. -29% decline due to logic update.

### Observations:

- There has been a slight increase in performance following the logic change, though there remains a small number of Shippers with performance at <80%.
- However, there are still a number of Shippers operating below UNC target (90%).

# 2A.13 AQ at Risk

The report measures the percentage of Annual Quantity within each product class without a meter reading for the required duration as set out in the UNC.

2A.13 AQ at Risk - Product Class split

### Observations:

- The majority of the AQ at risk sits within the PC4 market.
  - PC4 Monthly SMART has seen an increase this month, driving an increase in the total AQ at risk across all markets.
- PAFA continue to work with poorly performing Shippers to submit meter readings and reduce the volume of AQ at Risk.
