

# UNC 0807:

Mod Title: Minor update to legal text introduced under Mod0672S

Proposer: Scottish Power

Panel Date: 21<sup>st</sup> April 2022

# Why change?

- This Modification is seeking to make a minor amend to the legal text previous implemented under Modification 0672S, to ensure UNC reflects the intended purpose of the proposal to include Valid Meter Readings submitted in the Month (M) for Read Performance
- To clarify, Modification 0672S was raised to seek to reduce Unidentified Gas (UIG) volume by providing a target for read submission performance for Product Class 4 against overall portfolio

# Options

- There is only one option - to make the minor amendment to UNC TPD Section M.

# Solution

- Updating TPD M5.9.18 to ensure Meter Readings submitted by M+1 are considered into terms of Monthly Read Performance
- This Modification will change the highlighted reference (below) from ‘during calendar month M+1’ to ‘during calendar M and M+1’
- This will ensure Valid Meter Readings submitted in M are considered for Read Performance

5.9.18 For the purposes of paragraph 5.9.19:

- “**Target Monthly AQ Read Percentage**” and “**Target Annual AQ Read Percentage**” are the percentages expressed as such and set out in the Performance Assurance Report Registers (as updated from time to time);
- a User’s “**Actual Monthly AQ Read Percentage**” in respect of a calendar month (M) is calculated as follows:

$$(MMR / TAQM) * 100$$

where:

MMR is the sum of the Annual Quantity for each relevant monthly Supply Meter Point in respect of which the User submitted a Valid Meter Reading to the CDSP during calendar month M+1;

# Recommended Steps

- the Proposer recommends for this Modification:
  - Self-Governance procedures should apply, and
  - The proposal should go to one Workgroup for transparency.
