

Large LDZ Measurement Error – EBCC Awareness Only

- The Offtake Arrangements Workgroup is a UNC Forum which primarily meets to discuss matters related to the Offtake Arrangements Document.
- It was at their recent meeting on 4th August that discussions took place regarding a Large LDZ measurement error in LDZ EM (EM009 –Alrewas)
- This measurement error will produce a debit of approximately £14m across all Shippers in LDZ EM based on daily Weighted Market share for the period under investigation.
- National Grid have provided timelines for finalising reports on this error and passing them to Correla for invoicing.
- These charges will be included in the scheduled Amendment Invoice issued in November 2021.
- Correla have confirmed that they could provide indicative values to individual Shippers once available from National Grid.
- Credit and Risk at Xoserve have also asked for this information to be able to make early contact with these impacted customers.
- The reason for making EBCC aware is due to the large one off charges on the Amendment Invoice issued in November, which could have Cash Call impacts.
