# UNC Modification 799 - Workgroup #2

- During legal text drafting a number of Modification variations were identified: -
  1. Network identifier name for H100 mprn needs to change from “H100FIFESGN” to “H100FIFSGN” due to system character string constraints (business rule #4).
  2. The “document” referred to in business rule #5 and the information proposed to be contained therein is in fact the Data Enquiry System which is restricted to each individual Shippers protected information. The Network identifier will provide a Project Start and End date referring to the commencement of hydrogen flow and the cessation of hydrogen flow. Remove “Document” and replace with a reference to the Data Enquiry system.
  3. Business rule #14 – remove. Meter asset details will flow from MAM to Supplier to Shipper to CDSP via existing RGMA file flows.

# Thank you
