Timeline

The Energy Balancing invoice for month M (calculated at point IC1) has:

- (i) Days 23 to 31 of month M, calculated normally (i.e. apportioned on the basis of month M throughput);
- (ii) Days 1 to 22 of month M+1 (based on the month M throughput); and
- (iii) for Days 1 to 22 of month M (regarding the previous monthly cost period for the 'new role'), the reconciliation against what was invoiced for those Days in respect of month M-1 (i.e. corrected such that the costs over these days are based on the M throughput).
