↑ **808** Annual Change

2A.8 Count of AQ Corrections used by reason code
Observations:

- The AQ corrections under "change in consumer plant" have been reducing over recent months.

- An update in logic has been applied to the report from February 2022 onwards, whereby the report captures the number of AQ corrections that are effective for each respective month. The existing logic captured the number of times the AQ correction process was used by each Shipper, split by reason code.

- The PAC and will continue to closely monitor this area, particularly with the development of modification of "Modification 0783R – Review of the AQ correction process".

2A.9 Standard CF AQ > 732,000 kWh

2A.9 Count of sites above >732,000 kWh using standard CF
Observations:
- EUC04 continues to have a significantly higher number of standard correction factors incorrectly used compared to other EUC bands.
- Work with the CDSP continues in the area, but PAC are aware of the implementation of UNC681s and the potential impacts on the reports.
- Monitoring will continue.

No Annual Change

EUC08

↓ **2** Monthly Change
No Annual Change

EUC09

No Monthly or
Annual Change

2A.10 Count of meter reading replaced by EUC
Observations:

- Work with the CDSP has enabled the PAC to identify that in general, the spikes are due to Shipper's cleansing their portfolio.

- The number of replaced meter reads has generally been trending downwards across all EUC bands over the last few months.

2A.11 Sites above Class 1 threshold not in Class 1

The report measures the number of sites meeting or approaching or have reached the criteria for re-confirmation as Class 1 as set out in UNC G2.3.15b

Supply points above the Class 1 threshold

Total AQ (gWh) of supply points above Class 1 threshold
Observations:

- Number of sites above the class 1 threshold has increased over the past few months, with the majority of these sitting in Product Class 4.

2A.12a AQ Read performance – PC4 Monthly no SMART

The report measures the percentage of PC4 monthly read AQ for sites without a SMART meter with an AQ>=293000 kWh.

2A.12 AQ at Risk - Monthly no SMART industry average
2A.12a Distribution of AQ read performance for PC4 Monthly sites no SMART - 12 month average
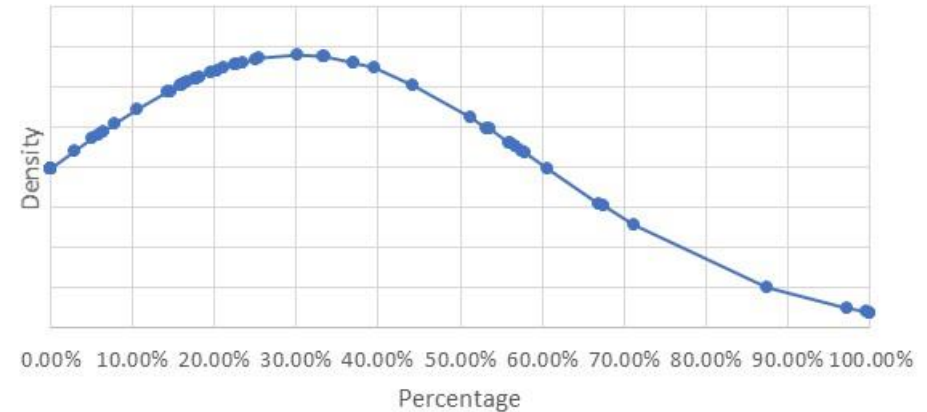

Observations:

- Industry average remains below target of 90%
  - A number of Shippers are operating below target (based on 12 month average).

- The decline in performance (from November 2021) is due to the correct logic being applied on the AQ Read Performance reports on the Data Discovery Platform (DDP).

2A.12b AQ Read performance – PC4 Monthly SMART

The report measures the percentage of monthly read AQ for sites <293,000 with SMART/AMR

2A.12 AQ at Risk - Monthly SMART industry average

2A.12b Distribution of AQ read performance for PC4 Monthly sites <293,000kWh SMART - 12 month average
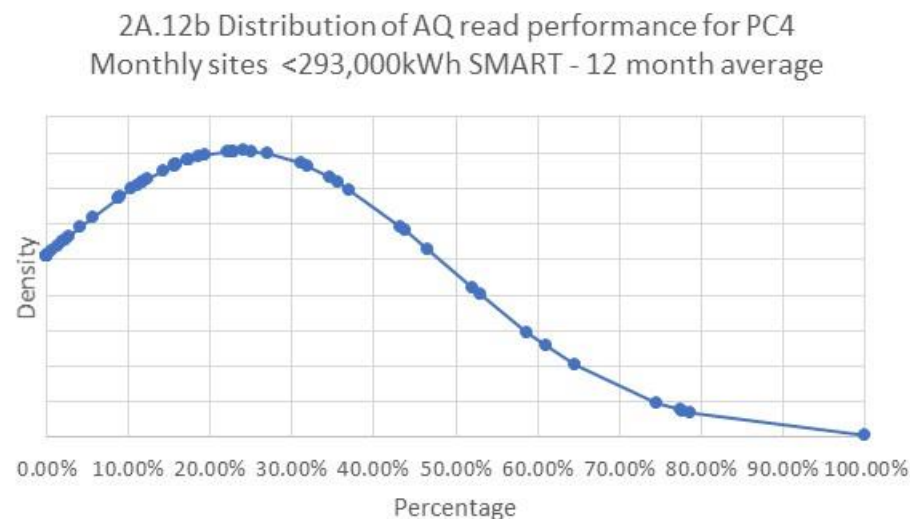

Observations:

- The decline in performance (from November 2021) is due to the correct logic being applied on the AQ Read Performance reports on the Data Discovery Platform (DDP).

- With the correct logic being deployed, the PAFA will work with Shippers on improving their performance in this area.
    - A number of Shippers remain on performance improvement plans.
    - Performance expected to decline as sites in the market increase due to implementation of Modification 0692.

2A.12c AQ Read performance – PC4 Annual

The report measures the percentage of annually read AQ for sites <293,000 with no SMART/AMR

2A.12 AQ at Risk - Annual read industry average

2A.12c Distribution of AQ read performance for PC4 Annual sites -12 month average
Observations:

- Performance remains relatively unchanged following the updated logic being applied to the reports.
- A small number of Shippers with performance at <80%.

- However, there are still a number of Shippers operating below UNC target (90%).

2A.13 AQ at Risk

The report measures the percentage of Annual Quantity within each product class without a meter reading for the required duration as set out in the UNC.

2A.13 AQ at Risk - Product Class split
Observations:

- The majority of the AQ at risk sits within the PC4 market.
  - There has been an increase in recent months to the SMART monthly category, accounting for one of the two top markets containing the largest volume of risk.
- PAFA continue to work with poorly performing Shippers to submit meter readings and reduce the volume of AQ at Risk.
