EDF Energy Response to Modification 0714 : "Use of Principles of Governance in Applying Section Y of Network Code"

Date: 28 October 2004

Dear Julian,

Thank you for giving EDF Energy the opportunity to respond to Network Code Modification Proposal 0714 "Use of Principles of Governance in Applying Section Y of Network Code". EDF Energy supports the implementation of this proposal as soon as practicable.

EDF Energy agrees with the Transco statement that the "Implementation of this Proposal will establish a clear set of principles, in addition to the relevant objectives, against which the Modification Panel will be able to judge the desirability of any proposal to modify Section Y of the Network Code". Adhering to the Principles of Good Governance ensure that best practise can be achieved and the modification process runs efficiently.

EDF Energy believes that the Network Code Principles of Good Governance should be a referenced document that is available to industry on Transco's website, and maintained and updated by the Network Code Modification Panel.

EDF Energy believes that 714 will better facilitate the relevant objectives as defined under amended licence standard condition 9 (b), which states that Transco is required to efficiently discharge of its obligations. We believe that assessment possible modifications to Section Y will ensure an efficient evolution of the modification rules.

We hope our comments have been useful in helping Ofgem assess the merits of this modification, but please contact me if you need to discuss further.

Regards

Helen Bray
