**Response to Modification proposal 739 New Seasonal Demand
Derivation and Associated AQ Impacts**

Dear Julian

E.ON UK supports the implementation of this modification proposal. The anticipated changes to reduce AQs are a necessary consequence of revising the normal weather definition. We consider it important that the changes are seen as a package as it would be unacceptable to change the normal weather definition without the changes to reduce AQs either normally or by scaling factors.

We agree with Transco that the proposal meets their GT Licence 'code relevant objective' of facilitating the efficient and economic operation by the licensee of its pipe-line system through securing the correct allocation of energy to Supply Meter Points.

We look forward to the timely implementation of this modification proposal.

Yours sincerely

Christiane Sykes
