Friday 1st April

Response to Modification proposal 743 Amendment of Nomination Timetable

Dear Julian

E.ON UK supports the implementation of this modification proposal. We agree with the proposer that enabling Users to submit DM Nominations later in the day (D-1), the accuracy of NDM attribution would be greatly improved and there would be less variation to NDM attribution within day.

Whilst this modification does, however, go some way to resolving issues surrounding posting accurate data to Transco, we would recommend widening the scope further. In simple terms, anything placed on AT-Link / Gemini, input or output, before the day (04:00 when AT Link closes) is a nomination; anything entered within day (06:00 when AT-Link re-opens) is a renomination. This not only simplifies the process but further improves NDM attribution within day.

As Transco have stated in the Draft Modification Report, the existing time period between Input Nomination deadline and Renomination Start Time, was originally required to allow Transco time to schedule the nominations. As this practice has effectively been automated and so takes minimal time to complete, we see no reason why the nomination window could not be widened further, as suggested above.

We look forward to hearing Transco's views on further widening the nomination and renomination windows.

Yours sincerely

Christiane Sykes.
