**Slant:** For  
**Strictly Confidential:** No

**Abstract**

RWE npower supports the above modification proposal.

Whilst not directly impacted by it we consider it vitally important that Transco NTS continues to receive at least the same level and accuracy of information regarding gas flows available for interruption currently as it did before DN sales.

Should this not be the case shippers and end user customers will face greater exposure to the consequences of Transco taking potentially inappropriate or inefficient actions to balance the NTS system, which is clearly not desirable.
