

SGN Response to Mod 0101: "Amendment to Demand Forecasting Timings in Relation to the Gas Balancing Alert"

0101: Amendment to Demand Forecasting Timings in Relation to the Gas Balancing Alert

Thank you for providing SGN with the opportunity to comment on the above modification proposal.

SGN are in support of this proposal.

Implementation would help align operating practice and UNC and better facilitate the relevant objectives by improving efficiency and economic operation of the pipe-line system. It should ensure NG are able to act upon more accurate and up to date information and issue GBA at earliest opportunity, thus ensuring Shippers have most accurate and up to date info and are given timely notification of a GBA and so can take appropriate actions to try and balance their portfolio. This should increase the ability of Shippers bringing the supply / demand into balance and avoid NTS as residual balancer having to take action.

As such SGN believes this proposal should benefit relevant objectives particularly the economic and efficient operation of the system and also benefit security of supply.

We hope you find these comment helpful
