Abstract

WWU are grateful for the opportunity to comment on the Modification Proposal.

WWU agrees with the Proposer's opinion that the additional balancing tool, created largely by utilising existing transportation assets at marginal cost, would further relevant objectives SSCA11.1(a) and (d) of a gas transporter's licence. We believe that introducing the new DN Entry service would enhance the efficient and economic operation of our pipeline system and the additional balancing tool offered to Users would assist in securing effective competition between relevant shippers and suppliers.

In addition we believe that the modification allows the facility to be operational this winter hence improving security of supply.
