

## Variation Request

### Modification 0120 “Introduction of an SO Commodity for NTS Storage Exit Flows”

The Proposer, National Grid Gas plc – Transmission, requests a variation to this Proposal, pursuant to UNC Modification Rules Section 6.5.1(c) of the UNC.

#### Reason for Variation

A suggested change to the legal text was highlighted in a representation, which we support.

#### Nature of Variation

A minor amendment to the layout of the legal text to that set out in the Final Modification Report. This is in response to a suggestion contained in a representation that the merging of two paragraphs of legal text proposed by Modification 0120 should be reverted back to the existing layout of two separate paragraphs. This, it is suggested, is consistent with the fact that one paragraph is in respect of Distribution and Transmission Commodity Rates, whereas the other paragraph is in respect of a Transmission Commodity Rate

National Grid therefore proposes the following variation to the legal text put forward in Modification Proposal 0120 :

- Section B 1.8.5 to remain unchanged as per the existing UNC text

Proposer

Paul Roberts (National Grid Gas plc - Transmission)

Proposer’s Representative

Dominic Harrison (National Grid Gas plc - Transmission)
