

Modification Proposal 0185V “Meter Error Notification Process”.

Date: 27 March 2008

The Proposer, EDF Energy, requests a variation to this proposal, pursuant to UNC Modification Rules Section 6.5.1 (c) of the UNC.

Reasons for Variation:

Having now been in receipt of the legal text associated with UNC Mod 185V, we have made some minor changes to the proposed Related Document that is appended to the proposal. As the intent of the proposal is to give effect to the proposed Related Document, we understand that this has the effect of varying the modification. In addition we have taken the opportunity to correct a grammatical error and a terminology inconsistency. We also believe that the legal text provided by Wales and West Utilities should be included as suggested legal text. We therefore believe that this variation is material

Nature of Variation:

1. Include reference to OAD Section D 3.1.5 in the proposed UNC Related Document, which provides the trigger point in the OAD. It should be noted that it was always intended to have this reference, but it has been left blank until receipt of the legal text.
2. Remove sections of Section 7 of the UNC Related Document. The text being removed appeared in version 0.6 of the related document as a result of a formatting error. They should not be included and so we propose that they should be removed.
3. Change to paragraph 4 of Section 1a of the modification proposal to refer to Measurement Error Reports as opposed to Meter Error Reports.
4. Deletion of an erroneous “to” in Section 8 of the proposed UNC Related Document.
5. Inclusion of suggested legal text.
