

Pre-Meeting note for DESC on 6th July 2020

Agenda Items Summary

2.0 2020/21 NDM Algorithms: Review TWG and DESC Representations (DESC VOTING)

- TWG and DESC will be asked to consider all the representations received on this year's draft proposals.

DESC will be asked to provide approval of the draft proposals and agree next steps in order to ensure the consultation window is concluded at the DESC meeting on 22nd July

3.0 Seasonal Normal Review Update (FOR INFORMATION)

- As we lead up to the 1st October 2020 when the new CWV and SNCWV values will become effective, an overview of the implementation activities remaining will be provided.
- A draft of the Seasonal Normal Ratios will be provided (final values expected at the DESC meeting on 22nd July). These ratios represent the difference between this year's EUC Demand Models using the current and revised view of Seasonal Normal weather. The ratios will be used during September's AQ calculation process where supply meter points fail to calculate an AQ during the normal process. This ensures all AQs from 1st October 2020 will be on the same Seasonal Normal basis.

4.0 DESC / TWG Feedback for CDSP (FEEDBACK REQUESTED)

- To support the CDSP's Key Performance Measures (KPMs) we'd like to discuss how and when we could collect feedback from DESC / TWG and the wider industry at certain points of the modelling lifecycle in order to ensure continual improvement in how the demand modelling is performed and presented.
