

Pre-Meeting note for DESC TWG on 22nd May 2020

Agenda Items Summary

2.0 Review of Single Year Modelling Results (TWG Recommendations required)

- The main business of the meeting is to review the results of the EUC demand modelling using the sample supply meter points presented to TWG on 27th April, including those EUCs where more than one modelling run has been chosen and so we will require confirmation on which model should be taken forward to the next phase

The results are split into Small NDM and Large NDM and cover all 39 End User Categories for each LDZ

- The analysis period covers the beginning of the COVID-19 lockdown period and the subsequent impacts to gas demand were visible in the initial modelling results (see slides in the Introduction slide pack). As per TWG agreement the last week of March 2020 has been removed from the main set of results presented in the Small and Large NDM material
- This year is the first using the CDSP's new EUC demand modelling system and so the output will look different this year and hopefully provides more insight. Feedback welcome.
- At the end of this agenda item we shall require confirmation that TWG are happy to proceed to the next phase which includes model smoothing and the calculation of the draft Gas Demand Profiles (ALPs, DAF, PLFs) for Gas Year 2020/21. The aim is to publish these no later than Friday 12th June.
