**Cadent**  
Your Gas Network

# GS(I&U)R

- DNs carry out GS(I&U)R obligations on behalf of Gas Suppliers
  - Cadent carry out c115,000 GS(I&U)R site visits each year
- Two UNC reports related to GS(I&U)R
  - TPD V15 (Mod 0469S) a Gas Safety Report outlining the status of the service 18 months after initial removal of the meter
  - TPD G3.9 (Mod 0518S) outlines obligations on Shippers to scrutinise a monthly Xoserve report, showing Supply Meters removed 6 months previous, and where necessary amend the address.
- Where a service cannot be located DNs will make phone contact with the Supplier
  - This is not always successful and Suppliers will often quote GDPR as to why customer and address data cannot be provided
- c800 services each year in the Cadent area cannot be located
- DNs are planning on adding an additional process step - formally lettering each Supplier to request further address data in order to assist us to carry out their obligation
  - Without such information DNs will be unable to confirm to the Supplier whether the service is now GS(I&U)R compliant
  - SPAA Contract Manager will initially be the first point of contact
