DPP and data provision update

PAFA DDP development

- PAFA have been working closely with the DDP BETA testing team on the implementation of the PAFA insights module;
  - First DDP drop for PAFA will include:
    - Transfer read performance
    - Estimated reads
    - No reads for 1-4+ years
- Very beneficial being involved in the early stages of development
  - Comments and suggestions are being listen to and concerns addressed very quickly
- One development rollover into next phase but phase 1 approved for release by PAFA
- Due to the nature of sprint implementation currently not clear when all current PARR data will be available on the DDP

PAFA DDP Development

- Use of the DDP platform will not give the PAFA access to more data than they have currently

- If approved Modification 0707, will put the PAFA on the DPM
  - DSC will still need to approve data item access
    - Question whether this is applicable to the provision of data currently available in the PARR suite?

- Nature of DDP development and the sprint process means that no final 'PARR' DDP delivery date is available at present
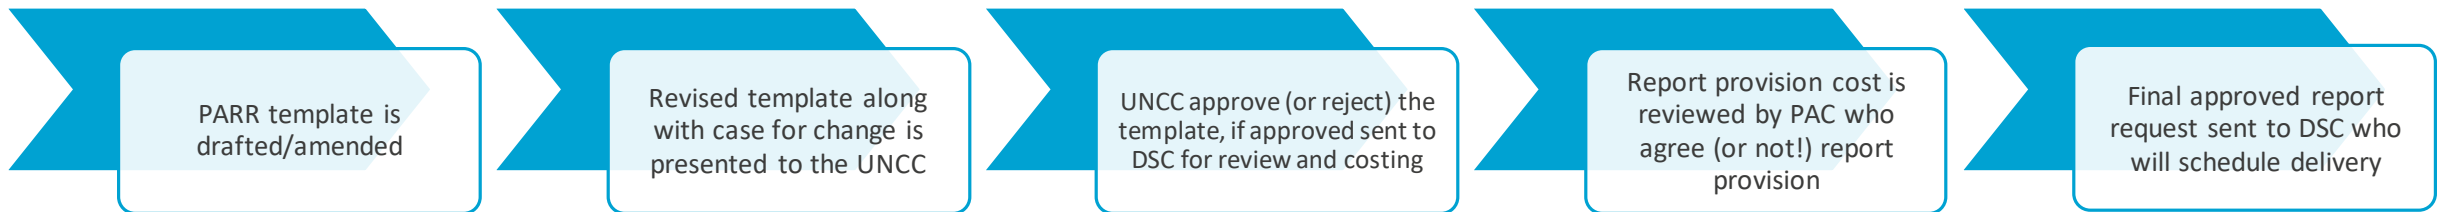

PARR report updates

- Outputs of PARR workshop circulated to Panel members on 03/12/19
  - No comments received so proceeding with implementation of data items requested

- Existing PARR reports that need to be significantly amended following the workshop will need to go through the UNCC for approval
  - Majority of changes are additional information for the 'B' reports so should not require approval?

- Plan is for as much of the additional data requirements to be factored into the future DDP drops, although a timeframe/schedule is not currently available to limit PAC costs

PARR report process

- 3 ways in which a PARR report can be requested/amended:
  - 1. Changes proposed to an existing PARR report
  - 2. PAC identify the need for a new PARR report
  - 3. implementation of UNC modification report requires creation of a PARR report

PARR template is drafted/amended	Revised template along with case for change is presented to the UNCC	UNCC approve (or reject) the template, if approved sent to DSC for review and costing	Report provision cost is reviewed by PAC who agree (or not!) report provision	Final approved report request sent to DSC who will schedule delivery

- Until DDP if fully rolled out or relevant data items are available all new/amended PARR reports will be delivered via current channels
- PAFA are considering appropriate monitoring, prioritisation and cost – views?
