

Supply Points above the Class 1 threshold which are not in Class 1 – September 2020

Statistics provided monthly since this issue was identified by the AQ Task Force – relates to meter points above the Class 1 qualifying threshold (58.6m kWh) but not yet in Class 1.

This month we have trialled the format of the proposed addition to the PARR (Performance Assurance Report Register) - see agenda item 3.1.

Once approved and added to the PARR, the standard Capital City anonymous codes will be used. Until then, Shippers can obtain details of their “Solar Moon” code names from their Xoserve
