Section 1 Overview

This document should be read in conjunction with General Terms B7, Derogations.

A derogation is a permission given by The Authority that relieves a UNC party from its obligation to comply with one or more sections of the UNC. Within the UNC, derogations can only be requested if they are required in relation to one of the specified Use Cases, as shown in UNC General Terms Annex B-1 and detailed within the Use Cases section of this document.

This document sets out the process for UNC parties to apply for a derogation from relevant sections of the UNC.

The UNC Modification Panel process requests and assess evidence and supporting documentation which will then be sent, along with the Panel's recommendation, to The Authority. This guidance is to aid both proposers of derogations and UNC Modification Panel members with the derogation process.

This guidance on derogations defines the type of information expected to be included in a request for a derogation, including, where appropriate, a quantitative and qualitative assessment of the impacts of the potential derogation on, amongst other things, competition, consumers, and where relevant, impact towards net zero.

Every derogation decision will be published on the Code Administrator Website, regardless of the outcome of the decision.

If it is identified that a UNC party would gain a commercial advantage or disadvantage from a derogation, then the derogation would not be recommended without UNC Modification Panel assessing what measures might be appropriate to offset that advantage or disadvantage, the proposer should identify these impacts and include their assessment within the derogation request. Such measures may also include requirements to monitor the impact of the derogation on both the party making the application and other parties who may be affected. Where applicable, the UNC Modification Panel may make a specific request to the Performance Assurance Committee (PAC) to monitor, and report back to the UNC Modification Panel as requested, relevant impacts which fall under their remit, however it will be expected that the applying party would provide outcomes of any relevant discussions as part of the application.

Where a project does not have a set end date, a backstop date will need to be provided, at which point the derogation will cease. Please note The Authority have the ability to impose a different backstop date as part of their decision.

Section 2 What is a derogation

UNC Parties (Shippers and Gas Transporters) are required to comply with the obligations as set out within the UNC. Compliance with codes is in the interests of gas parties and end consumers as a failure to comply can have a direct and adverse impact on the security and quality of gas supplied, and may have health and safety implications, or directly impact the cost of gas through the supply chain.

However, there may be occasions when, a party may find that adherence to a particular section or sections of the UNC may constrain the ability to carry out steps associated with Use Cases, for example innovation trials, pilots, or demonstrations to facilitate the pathway to net zero. In these

circumstances, a UNC party may submit to the UNC Modification Panel, via the Joint Office of Gas Transporters (Joint Office), a request for Derogation from the relevant UNC sections to ensure overall compliance with UNC obligations.

This document sets out the information the UNC Modification Panel requires in order to assess a request for a derogation and outlines the factors the UNC Modification Panel members consider in their assessment to enable them to provide a recommendation to The Authority. The Authority has final decision with reference to whether to approve, reject or send back, any derogation application.

Section 3 When would a derogation be required?

Continued compliance with the UNC is not only a code obligation but also ties into parties' licence obligations and is the responsibility of each relevant party. Failure to comply, unless permitted by a derogation, is a contravention of the UNC and therefore licence for which The Authority may take enforcement action and consequently issue an order and/or impose a penalty. However, as noted above, UNC Modification Panel recognises there may be occasions when there is a specific, justified requirement, that a UNC Party may not be in a position to comply with a particular section or sections as stated in the Use Cases. Such a derogation is likely to be limited in location and, or timescale. In this instance, should the trial be successful a more permanent solution should then be sought by the UNC party, via the standard UNC modification process

3a Early Engagement

Early engagement with industry is considered best practice and is encouraged. This is suggested to be a 'pre-derogation' discussion at the relevant workgroup. Please contact the code administrator for guidance and for the discussion to be added to the relevant agenda.

Section 4 Application Process

A request for a derogation should be submitted in writing to the UNC Code Administrator and should include sufficient information to enable the UNC Modification Panel to make a recommendation, including a comprehensive, and where possible, quantitative and qualitative assessment, of the impact of the proposed derogation.

Where the Application identifies a potential cross code impact, the Code Administrator will advise the relevant code body in accordance with the Cross Code Steering Group (CCSG) and Code Administration Code of Practice (CACoP) principles.

Parties should, where possible, include copies of any 'innovation pack' or similar that they may have had to put together for submission in relation to their funding application or other related applications. Commercially sensitive information may be redacted; however, this needs to have no bearing on the actual nature and impact of the derogation being requested.

Parties applying should also include the benefits of the derogation (and the outcomes of any related projects) for both the individual party/parties and the wider industry.

UNC Parties are asked to apply as soon as possible after the need for a derogation becomes apparent.

The Code Administrator will use the same distribution list (with the addition of notification to The Authority) as per new UNC Modification requests, to notify industry of a new request for derogation.

Section 5 Submitting a request

Where a UNC Party has identified that it will require a derogation from a relevant obligations in a section or sections of code in order to progress anything covered by one or more of the Use Cases, the UNC Party should make a written request using the relevant form (see appendix A) to the UNC Modification Panel care of the Code Administrator (as per email details on said form) requesting a derogation from the UNC requirement to comply with such obligations.

All technical terms should be fully explained, and the request should be presented in as clear a manner as possible to avoid unnecessary delays in UNC Modification Panel's assessment of the request.

Evidence of safety compliance should also be included. For the avoidance of doubt, the proposer will be expected to make factual statements. The UNC Panel shall not be required to independently verify any statement or representation made by the applicant Party regarding health and safety matters contained in the UNC Derogation Application.

The Code Administrator will perform a critical friend role at this stage; however, it should be noted that this is guidance in relation to the process only and is not an indication of the merit, or lack of, of any application.

Section 6 Minimum requirements of the request

The derogation request should include as a minimum:

- Details of the applicant (typically the Company Secretary), including the full name and address of the UNC Party concerned, as well as their 3 digit UK Link short code.
- A clear description of reference and text of section or sections of code that the derogation from is required in order to remain compliant.
- The reason for the derogation request including a clear description of the reasons why the non-compliance is expected to occur.
- Which Use Case the derogation is requested under.
- A comprehensive and, wherever possible, quantitative and qualitative assessment, of the impact of the derogation on:
 - Consumers
 - Including, where relevant, details as to how the end consumer will be impacted and any relevant mitigation
 - Competition
 - Other parties affected by the derogation, including where relevant, but not limited to
 - Central Data Systems Provider (CDSP)
 - Including, where relevant, a statement [*via ,at minimum, a Rough Order of Magnitude (ROM)*] from CDSP (as per standard 'change timeline') of their ability to facilitate any required system changes
 - Distribution Network Operators (including Independent Gas Transporters (IGT)
 - Transmission Operator(s)
 - Gas Shippers
 - Any other relevant parties affected by the derogation
 - Health and safety and the associated risk management and mitigation measures including
 - evidence that all necessary interactions with HSE have taken place and been concluded, and

Derogations Guidance Document
(For the Uniform Network Code) Version 2.0

- the applicant's safety assessment as laid out in this document.
- Details of any impacts to other codes including confirmation of application timeline for derogation requests from these codes, where relevant.
- Details of actions to mitigate risks to consumers or parties while the derogation exists
 - Details of any reporting that is required, including, but not limited to, PAC.
- A description of the alternative actions that have been considered
- The proposed duration of the derogation requested including the proposed start and end dates, and whether the derogation is also to be linked to a goal outcome (i.e. the latter of time or goal)
- Where there is not a set end date; a backstop date at which the derogation ceases to be valid or, in the case of an unused derogation, falls away.
- Any restrictions to the derogation based on locality, or other conditional factor (e.g. number of MPRNs)
- Where applicable, a description of the proposal for removing derogation including timetable of associated works.

Any known or suspected impacts to other codes (i.e. REC, SEC, IGT UNC) including identifying where IGT sites are also included in the derogation request.

Depending on the Use Case, some or all the above requirements may already be met within the relevant documents, for example the innovation pack and should be clearly referenced as such on the application form.

A derogation cannot be retrospective in nature.

The derogation may only apply to the applicant party and any downstream UNC Parties in relation to MPRNs within the scope of the derogation.

Only one party can be named as seeking a derogation per request, however a second party may submit an associated derogation requests to be considered (for example joint innovation projects with trials occurring on different networks, on the same, or differing timelines). The association should be noted in the request, and the UNC Panel can choose to consider these together. It should be noted that each will be considered on their own merits, and approval of one application will not be deemed approval of associated applications.

Applications will only be considered where the derogation request relates to one or more of the Use Cases as stated in UNC and detailed in the Use Cases section of this document (14b).

Section 7 Supporting Evidence

Below is generic information in relation to evidence, this should be read in conjunction with the evidence listed under the relevant Use Case for a comprehensive view of the required evidence for a specific derogation request.

Should the derogation request also require derogations or approvals from other codes, licence, standards, details of application timelines will be expected to be included. These must have been requested, and not rejected, prior to an application being submitted to Panel.

Whilst non UNC code derogations do not have to have a decision in order for the UNC Modification Panel to make a recommendation, any derogation granted by The Authority that also requires additional UNC or non UNC derogations will not be deemed to be valid unless these other derogations are also granted. The party applying for the UNC derogation will be expected to update

Derogations Guidance Document
(For the Uniform Network Code) Version 2.0

the UNC Modification Panel and The Authority via the Code Administrator of the approval or rejection of these additional derogations as applicable.

The applying party is required to submit a copy of the derogation request evidence as listed under the Use Case section (commercially sensitive nature may be redacted, as long as this information is not required to assess materiality of any impacts on other parties or includes key information that would be needed by the UNC Panel in their assessment).

The application should, where possible, include an assessment that demonstrates the relevant items from the following list:

- An assessment by the applicant that demonstrates that there are:
 - No significant risks associated with the derogation to the applying party, other relevant UNC parties or connected suppliers or end customers.
 - No avoidable adverse impacts (immediately or in the longer term) on the applying party, other relevant UNC parties or connected suppliers or end customers.
 - No additional measures that could be taken to further mitigate the impact of the derogation on the applying party, other relevant UNC parties or connected suppliers or end customers for the derogation's duration. (Or where there are additional measures, justification as to why they are not being used).
 - No outstanding objections from other parties who are materially affected by the derogation.
 - No competitive advantages for the applying party, arising from the derogation that cannot be addressed, that are not offset by a suitable mechanism.
 - No other reasonable options to address the non-compliance (that have not been considered).
- Where relevant the applicant has presented a robust case that supports the action that it considers necessary to address any impacts of the derogation.
- Where relevant the applicant has presented a realistic and comprehensive implementation plan that defines, at the very least, the works required to restore compliance.
- Any measures to mitigate the risks to other parties that will be (or have been) taken until the derogation ends.
- Any relevant PAC, or other reporting, is stated and has been agreed.
- Any relevant statements from Xoserve (and/or Corella) are included in relation to system impacts.
- The applicant has produced any other supporting information that is relevant to a specific request, including on the materiality of the issue.
- Safety related evidence as stated below.

Where an applicant is unable to satisfy all the above relevant criteria but has still met the minimum requirements to have their application considered by the UNC Modification Panel, the Panel will assess how far the applicant's ability to satisfy the criteria is deemed sufficient to justify the ability to vote to send a derogation request to consultation; it is noted that a justified derogation request would not necessarily need to meet all of the listed criteria. The UNC Modification Panel would use its judgement in assessing any derogation requests and would advise any applicant of additional information requirements that were not included in the original request.

7a Safety Evidence

Before a derogation application can be submitted to Panel it must include evidence that all necessary interactions with HSE have taken place and been satisfactorily concluded.

This must include the applicant's safety assessment which must, at a minimum, demonstrate that the derogation does not adversely impact on :

In relation to (a) through (d) below, 'gas' means 'gas as defined in the Gas Act'

- (a) the safe management of gas flow through a network;
- (b) the arrangements to minimise the risk of a gas supply emergency;
- (c) the arrangements for dealing with supply emergencies; and
- (d) the arrangements for dealing with reported gas escapes and gas incidents.

Should an application be made by additional parties, for the same scenario under the same Use Case, they may, with the other party's permission, duplicate the evidence from the other proposer where it is also relevant to their request. Any 'duplicated evidence' should be clearly marked as a duplication, including the originator derogation request reference number. The proposer will also be required to submit any additional evidence that relates to paragraphs of code being requested to be derogated from if this differs from the lead party's request. If these applications are presented at the same UNC Panel, then at UNC Panel's discretion, these associated applications may then be discussed as a suite. However, each request will be voted on individually, and a recommendation to approve, send back or reject the lead application does not automatically result in the same outcome for associated applications in the suite. Please note, The Authority has discretion as to whether to treat these as a suite or individually, and again approval, send back, or rejection, of one of the applications, does not automatically result in approval, send back or rejection of the remaining.

Section 8 UNC Modification Panel Assessment

The UNC Modification Panel will consider the derogation request in two stages. The initial consideration will be to confirm that the derogation request contains the minimum required evidence to allow for it to proceed to consultation. The second consideration will be to consider the merit of the derogation request based on evidence and consultation responses. It is at the second consideration where the UNC Modification Panel will vote on their recommendation, which will then be included in the final derogation report that is sent to The Authority for their consideration.

Each derogation request is assessed by the UNC Modification Panel individually on its merits in terms of meeting the minimum requirements set out in this document and the likely effect on other UNC Parties, wider industry and consumers, and safety impacts. It will also consider the likely effect for other UNC parties to continue to comply with their obligations under the UNC

In its assessment, the UNC Modification Panel may consider amongst other things the impact on:

- Consumers
 - UNC Modification Panel will consider the extent to which the derogation impacts on consumers, for example through increased costs, or risks of failure of supply
- Competition
 - for example, any competitive advantage that may arise from granting the derogation
- Other parties affected by the derogation, including where relevant, but not limited to
 - CDSP
 - Distribution Network Operators (including Independent Gas Transporters (IGT))
 - Transmission Operator(s)
 - Gas Shippers
 - Any other parties (e.g. Suppliers or other wider industry parties) impacted by the derogation
- Alignment to overarching strategic direction

Derogations Guidance Document
(For the Uniform Network Code) Version 2.0

- For example, does the derogation further development of Net Zero or environmental strategy
- Safety: That there is provided evidence or statement of no adverse impacts on any of *In relation to (a) through (d) below, 'gas' means 'gas as defined in the Gas Act'*
 - (a) the safe management of gas flow through a network;
 - (b) the arrangements to minimise the risk of a gas supply emergency;
 - (c) the arrangements for dealing with supply emergencies; and
 - (d) the arrangements for dealing with reported gas escapes and gas incidents.
- any other safety related impact as identified

Affected parties: Statements of the impact from these parties should be included in the application. Where relevant, UNC Modification Panel reserve the right to contact any of these parties to seek their views of the impacts. This may be done either via the standard derogation consultation stage or, where deemed appropriate, by direct contact to any such party via the Code Administrator. This can also include parties not identified in the application should the UNC Modification Panel decide that there may also be an impact on these.

UNC Modification Panel will consider any views from the relevant Distribution Network or National Transmission Systems of the impact of the derogation on them being able to effectively and efficiently operate its system if a derogation were granted.

UNC Modification Panel's assessment may, based on Use Case, also take into account benefits or impacts on, for example:

- The nature of derogations already granted by The Authority.
- The effect of the decision on future derogation requests.
- The impact of the derogation (and any associated overall project) in relation to the environment e.g. net zero.
- The impact of the derogation (and any associated overall project) in relation to potential benefits to consumers.
- The impact of the derogation (and any associated overall project) in relation to safety.
- Any other relevant information.

UNC Modification Panel may ask questions of the UNC Party, or their authorised agent, making the request at any of the relevant Panel meetings to clarify points relating to the derogation request and satisfy itself that there is a need for a derogation. A representative for the derogation request is expected to attend the relevant UNC Modification Panels where the derogation is included on the agenda, to facilitate this the Code Administrator will publish the UNC Panel agenda in advance of each meeting, they will also make reasonable endeavours to advise the proposer direct, outside of scheduled UNC Modification Panel meetings. The UNC Modification Panel may also contact the proposer in writing outside of scheduled UNC Modification Panel meetings, via the Code Administrator, to ask for additional information or clarity.

Section 9 UNC Panel recommendations

Any valid, completed requests for derogations received more than 10 business days prior to a scheduled UNC Modification Panel meeting will be considered at that scheduled meeting.

UNC Modification Panel members have discretion based on majority vote to defer consideration of any derogation request to the next scheduled Panel (or specifically convened Panel) meeting for any application(s) with a large volume of supporting documentation, or of a more complex nature.

UNC Modification Panel members have discretion to request additional supporting information, where deemed relevant, based on majority. Where this cannot be provided at the time by the

Derogations Guidance Document
(For the Uniform Network Code) Version 2.0

proposer, this process would result in the deferral of the vote to approve the derogation request to the next scheduled Panel meeting (Panel have the discretion to manage this by extraordinary Panel meetings).

UNC Panel will assess the information provided and check that the minimum evidence level required as stated in the guidance document for both general derogation requests, and for the relevant Use Case have been met. Once it has been agreed that the evidence level has been met the UNC Modification Panel members will vote to send the derogation request out for industry consultation. Panel members have the discretion to advise the Code Administrator where it determines that the standard time period for a consultation (aligned to the standard time period for a modification) should be deviated from in relation to the relevant derogation.

The UNC Modification Panel will then, at a UNC Modification Panel scheduled meeting, no less than 10 business days, or any longer or shorter period as deemed appropriate by Panel majority, following the closing date of the derogation consultation, make a recommendation on the approval or rejection of the derogation request.

The Code Administrator will compile a Final Derogation Report (FDR) in which it will include any key points raised in consultation responses. This FDR will also include relevant points from the discussion at Panel and their recommendation to The Authority.

Should the UNC Modification Panel determine that they require further views or clarity in relation to the consultation responses, they have the ability to defer the matter scheduled Panel meeting (or 1st scheduled Panel following receipt of requested additional information) whilst they seek the views of or clarity from the proposer or other such deemed party.

The FDR, including the Panel's recommendation, along with all relevant supporting information, will then be sent to The Authority.

When considering whether to recommend to The Authority that a UNC Derogation be granted, the Panel shall determine whether such proposed derogation meets the eligibility criteria set out in the UNC's Derogation Guidance Document (this document).

Derogation recommendation is subject to the voting as stated in the UNC, this is repeated here for clarity. For the avoidance of doubt, should this document become misaligned with the UNC, then the voting as stated in the UNC will take precedent.

A derogation can only be granted by The Authority. UNC Modification Panel members will vote to make a recommendation. This recommendation will be in accordance with UNC Modification Rules 2.1.

If UNC Modification Panel considers that the derogation request has not been sufficiently justified, then the UNC Modification Panel may

- Prior to the consultation vote, request additional information from the applicant
 - This can be provided during the Panel, or afterwards. For the later, and former where appropriate, the Panel will defer the decision to a future Panel meeting.
- Prior to the recommendation vote, request additional information from the applicant
 - This can be provided during the Panel, or afterwards. For the later, and former where appropriate, the Panel will defer the decision to a future Panel meeting.
- Recommend to The Authority not to approve the request.
 - Should at any point, except where a Derogation Application has been approved by The Authority and is in effect, Where the UNC Modification Panel believes that non-compliance with the UNC is, or may still occur or that impacts to Settlement,

Derogations Guidance Document
(For the Uniform Network Code) Version 2.0

Allocation or Unidentified Gas (UIG), they may notify PAC, who may take any action in accordance with their existing remit

UNC Modification Panel may reserve the right to include in the FDR to The Authority that an approved Derogation Request is subject to certain conditions being satisfied (e.g. interim reporting), either by the party to which the derogation applies or in respect of the wider system. Should UNC Modification Panel recommend imposing of additional requirements, they will include details as to their reasoning. The Authority is under no obligation to include these in its direction.

Should an approved Derogation be revoked by The Authority, this will be published on their website. The joint office will also update the derogations register, as soon as is reasonably practicable following publication of this notice.

Should a derogation request be rejected by The Authority, a new application for the same derogation cannot be submitted without it containing material changes from, or having addressed the reason for the rejection of, the original application.

- Whether changes to a resubmitted application are deemed material in nature is subject to majority vote by UNC Modification Panel.
- Should UNC Modification Panel deem that the changes are not of material nature, the derogation will not progress further and will be rejected as an invalid application without proceeding to vote.

A derogation granted to a UNC party cannot be transferred to another UNC Party, regardless of association.

Should a UNC party change name, but retain the same company number, the derogation will remain valid, however the party is required to write to the UNC Modification Panel and The Authority, via the Code Administrator with a minimum of 30 days advance notice of this name change.

The Code Administrator will maintain a register of derogations that have been requested, including, but not limited to:

- Date application received by Code Administrator
- Date Derogation voted by Panel, and the outcome of the recommendation
- Date of The Authority's determination
- Details of The Authority 's determination (Approve, Reject, Send Back)
- UNC Section(s)the derogation applies to
- Start date
- End Date
- Duration
- Any additional restrictions (e.g. locale)
- Name of applicant party
- A link to the relevant derogation application

All derogation requests that are subject to additional derogations, or have an unspecified end date, must also include a backstop date in the application, at which point the derogation ceases to be valid or, in the case of an unused derogation, falls away.

Where a derogation is approved for a stated length, with an unfixed start date, or is subject to only being applicable should other derogations also be granted, it is in the gift of The Authority to impose a backstop date to the one requested, or any fixed end date stated, by the proposer

Section 10 Start of derogation

After the UNC derogation has been approved, the start date of the actual derogation will be confirmed by the proposer to the Code Administrator. This date will then be communicated to all relevant parties, including The Authority, and published on the website no later than 16 working days before it is due to commence. The Derogation Register will be updated, and a footnote added to the relevant page of code noting that an approved derogation request exists.

Should any agreed date of derogation be reached and the derogation remain unable to be implemented, the derogation will be deemed to have fallen away at this point and therefore may no longer be used, at this point any relevant footnotes will also be removed from code.

Section 11 The Authority's powers in relation to UNC derogation requests

In making a determination in respect of a Derogation Application, The Authority:

- may follow such procedure as it considers appropriate;
- may have regard to such matters, and to any representations by such Parties, as it considers appropriate; and
- shall, in any event, have regard to the recommendation made by the Panel.

Where The Authority determines that a Derogation Application shall be accepted or rejected this will be published on the Authority's website (www.Ofgem.gov.uk) .

The Code Administrator shall, as soon as is reasonably practicable after the direction by The Authority, notify the Derogation Applicant and shall ensure that the Derogation Register is updated so as to indicate the decision by The Authority. Any approval by The authority will only be applicable subject to any additional derogations, as stated under 'Evidence' above, also being approved by the relevant bodies., unless specifically stated otherwise by The Authority

Section 12 Amendments to existing derogation requests

Any amendment to an existing derogation request can only be made by submitting a new derogation request to supersede the original request.

Requests for superseding of an existing approved derogation request may only be made by the licenced party who the original derogation is granted to. Requests must include details of why the amendment is required along with a statement as to the impact if the amendment is not approved. Applications will also be required to confirm whether the amendment changes any of the consequential impacts, and if so, what these are.

Where a Derogation request has not yet had a recommendation vote by Panel: The original derogation request will be superseded with immediate effect, and will be reconsidered as a new derogation request, i.e. starting the process from the beginning with a new derogation request number, and including all necessary evidence etc. It will need to clearly state the number of the original derogation it is superseding.

Where a derogation request has already been through a recommendation vote by Panel and is with The Authority, who have not yet made a determination, the original derogation request will remain outstanding until The Authority make a determination for each derogation request.

Derogations Guidance Document (For the Uniform Network Code) Version 2.0

Where a derogation request has already been approved by The Authority the original derogation approval will remain valid, until The Authority give their determination in respect of both the new derogation request and the original approved derogation (if applicable).

Where the new approved derogation supersedes an existing derogation, the original derogation ceases to be valid, and the proposer will need to confirm that any elements from the original no longer covered by a valid derogation are compliant with code.

Should The Authority not approve a replacement derogation request, then the existing derogation will remain valid, unless specifically revoked by The Authority. If the original request is no longer required, it should be formally closed by the proposer.

Examples of when a superseding derogation may need to be requested will be listed, for information only, under each of the Use Cases as detailed further within this document.

Should a party who has successfully had a derogation granted cease to be a valid UNC party before the start of the derogation, the derogation will fall away without being implemented.

Should a party who has successfully had a derogation granted cease to be a valid UNC party during the terms of the derogation, the UNC Modification Panel will manage the related derogations on a case-by-case basis. UNC Modification Panel will, with input from CDSP and PAC as relevant, take into account the steps needed to reverse any system changes etc.

Section 13 Ending a derogation

Whilst derogations will automatically end on their expiry date, (usually milestone or time) the proposer will need to confirm that this has been complied with.

All derogation requests should include an exit plan to advise how the proposer will ensure that they will comply with code at the end of the derogation. This also needs to include how this will work in relation to any Central System changes that were required for the derogation. For the avoidance of doubt, it is the proposer's responsibility to ensure that any relevant statements from the CDSP are obtained and that required work is carried out. A statement to the Code Administrator confirming successful ending of the derogation and reversion to code (including system changes) should be submitted on (or before) the date the derogation ends. Should this not be received by the derogation end date it will be assumed that the party is in breach of code. An agenda item will be added to the next UNC Panel meeting for awareness.

Should an approved derogation no longer be required, either before it has started or during its term, it can be ended by submission of the above statement at any time before or during the derogation period. The Code Administrator will update the derogation record and inform industry of the expiry of the derogation. For the avoidance of doubt, any withdrawal of an approved derogation does not need to be approved by UNC Panel or The Authority.

The Authority retains the ability to revoke an approved derogation should they become aware of any change in circumstances that would deem that the derogation is no longer in the best interests of industry and, or consumers.

Section 14 Use Cases

This section lists the Use Cases, these are defined in UNC, with additional clarity included here around the minimum requirements for application and the associated evidence to be provided.

Derogations Guidance Document
(For the Uniform Network Code) Version 2.0

Where a Use Case definition is provided in this document it is for clarity only and will be taken from the UNC definition. For the avoidance of doubt, should this document and code become misaligned, code will take precedent.

A derogation approved under a Use Case will also apply to IGT sites, where the same Use Case also exists in the IGT UNC.

14a Adding New Use Cases

Where a new Use case is required, this must be requested via the standard UNC modification process which, if approved, will add the Use Case into UNC General Terms Annex B-1 of the UNC, as well as below.

Use Cases must contain a clear description of the circumstances where the Use Case may be used, along with clear parameters that any derogation applications under the Use Case must contain. Mandatory evidence to support the application must also be clearly laid out.

It is expected that the amendments to this document are included in the modification proposal, clearly marking them as amendments/additions to the Derogation Guidance Document, allowing these to be developed by workgroup along with the modification. Once the modification is approved the Derogation Guidance Document changes should be presented for UNCC to vote to approve. Please note, that implementation of the modification should not take place in advance of UNCC approval.

It should be noted that any derogation approved under the UNC, will also apply to the IGT UNC ONLY if there is a matching use case within the IGT UNC. Therefore, when adding a use case please consider ensuring that a mirror use case is also proposed to be added to the IGT UNC under the correct governance.

14b Approved Use Cases

14b(i) Net Zero Innovation

What - Net Zero Innovation is defined as facilitating a net zero innovation project, trial or demonstration that is directly relating to net zero, as defined in the Gas Transporters Licence Special Condition 1.1 and are usually time bound.

Gas Transporters Licence Special Condition 1.1 states:

Net Zero Development

means a change in circumstances related to the achievement of the Net Zero Carbon Targets that is:

- (a) a change in national government policy (including policies of the devolved national parliaments);*
- (b) a change in local government policy;*
- (c) the successful trial of new technologies or other technological advances;*
- (d) a change in the pace or nature of the uptake of low carbon technologies; or*
- (e) a new obligation arising from the agreement of a Local Area Energy Plan or an equivalent arrangement.*

When - A derogation under the Net Zero Innovation Use Case should be requested when a party may find that adherence to a particular section or sections of the UNC may constrain the ability to carry out innovation trials, pilots or demonstrations to facilitate the pathway to net zero.

Parameters:

Derogations Guidance Document
(For the Uniform Network Code) Version 2.0

- A. A request for derogation must be submitted on the template with all sections completed (stating N/A or none, where a field may not be relevant), and in line with the minimum requirements as set out in section 6 of the Derogation Guidance Document
- B. The request must be accompanied by the mandatory evidence (as shown below). Additional evidence may also be submitted to support the application. All evidence must be clearly labelled.
- C. A derogation request must be either
 - a. timebound with clear start and end dates for the derogation window, and where relevant also include the length of time the derogation will remain in place, or
 - b. milestone bound, with clear descriptor of milestones. With start and end milestones clearly identified and how these are to be evidenced. Milestone bound requests will also need to have an expiry date (for start and end) where they request, or derogation itself will naturally expire should the milestone not be achieved.
- D. Location relevant information, e.g., LDZs or Postal out codes
- E. Number of meter points included in derogation (can be a reasonable maximum rather than specific)

How - The minimum required evidence (further to evidence mentioned in section 6, the Minimum Requirements of the Request) should consist of:

Innovation pack, which must contain (but is not limited to):

1. The following items in relation to the overall Innovation project
 - a. The overall objective of the project
 - b. Impact Analysis
 - c. Project Timeline, Funding stream evidence/approval
 - d. Approval/awareness from BEIS/The Authority
2. The following items in relation to the trial/demonstration etc that the derogation is to relate to
 - a. Communication Plan
 - b. Risk Assessment
 - c. Risk Management plan
 - d. Impacted parties
 - e. Mitigation plan for impacted parties
 - f. A statement from the CDSP confirming any required system changes are known and able to be carried out (at the proposer's cost), including any exit plan.
 - g. Confirmation as to whether or not any IGT or Direct Connect sites are included in the derogation

Please also refer to the Supporting Evidence Section (7), for additional evidence that is requested, included mandatory evidence in relation to safety.

Examples of where a derogation to supersede an existing derogation under this Use Case might be submitted could include:

- Increasing the number of MPRNs the derogation allows
- Changing the LDZ or postal area where the derogation applies
- Changing the start or end date of the derogation

[Section 15](#) Process Map

Published for information only.

See separate document [here](#).

This Process Map is a visual aid to assist UNC Panel Members, proposers, and wider industry, in understanding this process. For the avoidance of doubt, should this document and the process map become misaligned the process as stated in this guidance document will take precedent, with UNC taking precedent over both.

The CDSP pre derogation element of the process is also included for information, should this become misaligned with the current CDSP process, then the latter will take precedent.

Appendix A (application form)

Derogation Application Form – provided for reference, please download the latest version of the form from www.gasgovernance.co.uk should you wish to submit a derogation request.

UNC Derogation Application	At what stage is this document in the process?

Summary of Derogation

Please provide details of the specific obligation(s) to which you are seeking a derogation quoting relevant UNC paragraphs:

Please refer to section 6 & 7 of the Derogations Guidance Document

Insert text here.

Reason for Application

Please provide details of the justification for seeking this derogation (including any alternative actions that have been considered, and reason that these are not being pursued):

Please refer to section 6 & 7 of the Derogations Guidance Document

Insert text here

Conditions

Please provide a description of the conditions of this derogation (i.e. location, or other restrictions):

Please refer to section 6 of the Derogations Guidance Document

Insert text here.

Timescale

Please advise the period of time for which the derogation is sought (including start and end dates):

Please refer to section 6 of the Derogations Guidance Document

Insert text here.

Commencing On

Ending On

Backstop Date

Should your derogation not include a fixed end date, please provide a backstop date.

Associated Derogations or similar

Please provide details of any previous or current derogations or permissions (for example licence, other codes or standards) which are related to this application.

Please refer to section 7 of the Derogations Guidance Document

Insert text here

Effect on Other Parties

Please provide details of the requested Derogation's anticipated impact on the costs and operations on other parties:

Please refer to section 6, 7 & 8 of the Derogations Guidance Document

Impact of the change on Consumer Benefit Areas:	
Area	Identified impact
Improved safety and reliability Insert text here	Positive/Negative/None
Lower bills than would otherwise be the case Insert text here	Positive/Negative/None
Reduced environmental damage Insert text here	Positive/Negative/None
Improved quality of service Insert text here	Positive/Negative/None
Benefits for society as a whole Insert text here	Positive/Negative/None

Cross-Code Impacts

Insert text here.

Central Data Systems Provider Impacts

Insert text here.

Details of Any Reporting Required

Insert text here.

Safety Case

Before a derogation application can be submitted to Panel it must include evidence that all necessary interactions with HSE have taken place and been satisfactorily concluded.

Please refer to section 7 of the Derogations Guidance Document

Insert text here.

Derogation Footnote

Sections of UNC that required Footnote added
