

UNC 0819:

Mod Title: Establishing/Amending a Gas Vacant
Site Process

Proposer: Lee Greenwood

Panel Date: 15 September 2022

Why change?

- No process to amend AQ values for Vacant sites as;
- An AQ for a site can only be amended by obtaining meter readings
- Shippers cannot access the site(s) to obtain meter readings
- Shipper is unable to contact the customer to obtain meter readings (in some circumstances)

Options

- Multiple options discussed in Workgroup 0783R with the Modification submitted being the conclusion of the Workgroup

Solution

- Establish a new process for Shippers to follow to cease:
- Settlement Performance Obligations, Commodity Costs, and Daily Gas Allocation
- After 12 months; the Shipper will have the option to set the AQ to 1 through the AQ correction process (new correction code / eligible cause created) for Capacity relief

Recommended Steps

- The Proposer recommends that this modification should be:
 - Workgroup assessment to develop the modification
 - Workgroup 0783R already completed
 - Not subject to Self-Governance
 - Authority Direction is proposed for this Modification, as the last time this subject was discussed in 2011 (Modification 0282 & 0282A) it was considered a material change and not subject to Self-Governance. The view of Workgroup 0783R was that this was still the case for this Modification due to the potential impacts in Gas Allocation, Reconciliation and UIG.

Document Control to be removed upon completion of the template.
