

Administrative Amendments to the DPM following detailed review

January 2024

Data Permission Matrix

- Review / detailed assessment of the DPM was undertaken to support the REC Data Catalogue work
 - This highlighted inconsistencies in the DPM that needed to be addressed
- **Amend Data Type:** We have identified that the Meter Point Conversion Factor was associated with Meter Asset History data type. Conversion Factor is a data item that is specific to the Meter Point therefore the history data item should be moved to Supply Meter Point History.
- **Remove the following:**
 - Converter Asset Data: Converter Device Type – this data item doesn't exist in the same way that a Meter Type exists. Therefore it is proposed that this data item is removed.
 - Meter Asset Data: Conversion Factor – this data item is relevant for the Supply Meter Point and not at the Meter Asset. The DPM already includes provision of the current MP Conversion Factor, therefore this data item can be removed. There are no changes to the permissions required as the PAFA is able to access the existing data item.
 - Supply Meter Point Information: Installation Type – this data item relates to where the Supply Meter Point exists on the Network. The one recorded recipient of this data item does not consume this data item therefore we propose that this is removed from the DPM.
 - Supply Meter Point Information: CSEP Full Name – this data item is superfluous as CSEP Site Name is present.

Amended DPM

- V25 of the DPM mark ups:

DATA TYPE	DATA ITEM
Converter Asset Data	Converter Device Type
Meter Asset Data	Conversion Factor
Supply Meter Point History Meter Asset History	Conversion Factor-Meter Point Conversion (Correction) Factor
Supply Meter Point Information	Installation Type
Supply Meter Point Information	CSEP Full Name

- CoMC are requested to approve the proposed revision to the DPM
- NB: the relevant change will be raised to the DAM
