

MOD654s - Intro

- Mod 654s was approved and became effective from 01/03/2019
- All Shippers with a portfolio greater than 25,000 MPRNs are required to submit actual daily gas consumption for NDM sites in EUC bands 1-9 (referred to as 'NDM sample data') to Xoserve
- Data is expected monthly, by the 5th Business Day of each month, unless shippers notify Xoserve otherwise (as per UNC Section H 1.6.13)
- Data from Shippers with a portfolio of less than 25,000 is welcomed but not mandatory
- This data is used in EUC modelling to produce the parameters used in the daily NDM allocation process
- Quality data will result in more accurate NDM allocations, which in turn will help to reduce Unidentified Gas volatility

MOD654s – Summary of Data Received

- As of 01/03/2019, **36** Shippers have a portfolio greater than 25,000
 - Xoserve emailed all 36 Shippers in March 2019 notifying that this MOD had gone live and offering our support
- Of these **36**, Xoserve has currently received data from **21** Shippers
- We also received data from **2** Shippers that were not required to send data
- Data from **10** Shippers were able to be used in the 2019/20 modelling process, due to voluntarily providing data back to 22/02/2018. This was above and beyond what is required from this MOD.
- Xoserve will now provide feedback to shippers who submitted data and also contact those shippers who are yet to submit data
