2. BACKGROUND

Evesham has two turbine meter streams using a gas chromatograph for CV determination and PTZ correction.

On 1st August 2012 during the annual validation the CP10 (Gauge Pressure Transmitter Check) test failed on meter stream B, subsequently passing following re-calibration. Stream B had been the duty stream since the previous validation on 28th July 2011.

3. ERROR QUANTIFICATION AND IMPACT

The pressure was corrected for the 'As Found' errors shown in Table 1 taking into account the errors in analogue-to-digital conversion that also affected the pressure measurement. The pressure was between 20 and 40 barg for the duration of the error.

| Corrected Pressure (barg) | CP10 Error (% span) | CP4a Error (% span) | Combined Error (% span) |
|---------------------------|---------------------|---------------------|-------------------------|
| 0 | 0.05 | 0.0275 | 0.0775 |
| 20.012 | -0.1279 | 0.02 | -0.1079 |
| 40.025 | -0.5557 | 0.0213 | -0.5344 |
| 60.037 | -1.0273 | 0.0138 | -1.0135 |
| 80.049 | -1.4864 | 0.0138 | -1.4726 |

Table 1 – CP10 As Found errors

The density, flow rates and daily volumes were recalculated using the measured pressure and the corrected pressure. The error was calculated on a daily basis as the difference between volume totals using measured and corrected pressure.

4. CAUSES

Gauge pressure transmitter check failed during routine validation.

5. RECOMMENDATIONS AND LEARNING

Failures of this type will occur occasionally, if the same checks fail regularly then it suggests a fundamental problem with the equipment being tested and repairs or replacements should be made.

It is recommended that the error of 1.016 % under-registration is reconciled using the table in Appendix A. As the start date of the error cannot be identified only half of the error should be reconciled in accordance with the Offtake Agreements Document.

APPENDIX A – Daily Correction Factors

Where calculated (uncorrected) data differed significantly (>2%) from Gemini billed data a default correction factor has been used. The default correction factor is the average error excluding days where bad data was present or only part of the day was in error (=1.010174).

| Gas Day | Daily Correction Factor |
