

Demand Estimation Sub-Committee (DESC) Key Messages – 24 April 2024

Agenda Item Outcomes

Agenda Item 2.0: Collection of Daily Gas Consumption Data for EUC Modelling

DESC reviewed the outcomes of this year's collection and validation of daily gas consumption data from a sample of the NDM population. This data is a key input to the production of new EUC demand models and profiles for Gas Year 2024/25.

DESC approved all the proposed EUC demand modelling runs along with Winter Annual Ratio (WAR) Thresholds. The results of the single year modelling will be discussed at the next DESC meeting on 22 May.
