

Demand Estimation Sub-Committee (DESC) Key Messages – 22 May 2024

Agenda Item Outcomes

Agenda Item 3.0: Review of NDM Single Year Modelling Results (2023/24 data)

DESC reviewed and approved the outcomes of this year's End User Category (EUC) Demand Modelling results for the latest 12 month analysis period (1 April 2023 to 31 March 2024).

These demand models are a key input to the production of revised 'smoothed' EUC demand models (based on the latest 3-year analysis periods) and the profiles for Gas Year 2024/25.

The first set of draft Gas Demand profiles will be shared with DESC to review on 7 June, which represents the start of the industry consultation process with follow up meetings and further opportunities to review during July.
